

M.Sc. Agriculture Biotechnology

Semester--I

Course Title: Cell Biology

MM. Th 80 + IA 20

Course No. ABT 111

Time: 3h

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

UNIT I

Diversity of cell size and shape.

Cell Theory.

Structure of Prokaryotic and Eukaryotic cells- Isolation and growth of cells.

Microscopic techniques for study of cells.

Sub-cellular fractionation and criteria of functional integrity

UNIT II

Cellular organelles- Plasma membrane, cell wall, their structural organization, Mitochondria, Chloroplast; Nucleus and other organelles and their organization.

Transport of nutrients, ions and macromolecules across membrane.

UNIT III

Cellular energy transactions - role of mitochondria and chloroplast

Cell cycle - molecular events and model systems

Cellular responses to environmental signals in plants and animals- mechanisms of signal transduction

UNIT IV

Cell motility - cilia, flagella of eukaryotes and prokaryotes

Biology of cancer

Metabolite pathways and their regulation

Biosynthesis of proteins in Eukaryotic cell, Co- and post-translational modification, intracellular protein traffic.

UNIT V

Cellular basis of differentiation and development-mitosis, gametogenesis and fertilization. Development in Drosophila and Arabidopsis, Spatial and temporal regulation of Gene expression.

Brief introduction to the Life Cycle and Molecular Biology of some important pathogen of AIDS, Malaria, Hepatitis, Tuberculosis, Filaria, Kalazar.

Practicals

Microscopy: Bright field, phase contrast & Fluorescence Microscopy.

Microtomy

Instrumental methods for Cell Biology

Sub cellular fractionation and marker enzymes.

Histochemical techniques

Mitosis & Meiosis

M.Sc. Agriculture Biotechnology

Semester--I

Course Title: Biomolecules and metabolism

MM. Th 80 + IA 20

Course No. ABT 112

Time: 3h

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

UNIT I

Chemical foundations of Biology –pH, pK, acids, bases, buffers, weak bonds, covalent bonds. Principles of thermodynamics. Classes of organic compounds and functional groups-atomic and molecular dimensions, space filling and ball and stick models. Macro molecular and supra molecular assemblies.

UNIT II

Amino acids and peptides-classification, chemical reactions and physical properties
Sugars - classification and reactions, Heterocyclic compounds-and secondary metabolites in living systems - nucleotides, pigments, isoprenoids, Separation techniques for different biomolecules

UNIT III

Physical techniques in proteins, nucleic acids and polysaccharides structure analysis (UV, IR, NMR, LASER, MASS, Fluorescence spectroscopy, Differential calorimetry, X - ray Crystallography, Ultra Centrifugation, Electron cryomicrography, Scanning Tunneling microscopy.

UNIT IV

Lipids- classification, structure and functions
Proteins-protein and protein legand interactions, end group analysis, hierarchy in structure, Ramachandran map.
Conformational properties of polynucleotides, Polysaccharides - types, secondary and tertiary structural features, analysis- theoretical and experimental;
Protein folding – biophysical and cellular aspects.

UNIT V

Water and its properties, enzymes coenzymes, metabolism of carbohydrate, amino acids and lipids, in born errors of metabolism.

Bio-energetics and oxidative phosphorylation. Blood clotting – biochemistry, body fluids – pH and acid base balance and their importance in clinical biochemistry, muscle contraction. Techniques in the study of proteins, carbohydrates and lipids.

Practicals

Titration of amino acids

Colorimetric determination of pK

Model building using space filling/ball and stick models

Reactions of amino acids, sugars and lipids

Isolation, purity determination and quantitation of cholesterol, DNA and mRNA

Quantitation of Proteins and Sugars

Analysis of oils-iodine number, saponification value, acid number

UV, Visible, Fluorescence and IR spectroscopy, Absorption spectra

Separation techniques - Centrifugation, Chromatography (Gel permeation, Ion exchange, TLC etc. and Electrophoresis

3. L. Stryer, Biochemistry, 5th edition, W.H. Freeman and Company, 2002.

M.Sc. Agriculture Biotechnology

Semester I

Course Title: Microbiology

MM. Th 80 + IA 20

Course No. ABT 113

Time: 3h

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

UNIT I

The Beginning of Microbiology: Discovery of the microbial world by Antony van Leeuwenhoek: Controversy over spontaneous generation, Role of microorganisms in transformation of organic matter and in the causation of diseases Development of pure culture methods Enrichment culture methods, developments of microbiology in the twentieth century. Methods in Microbiology Pure culture techniques; Theory and practice of sterilization; Principles of microbial nutrition Construction of culture media; Enrichment culture techniques for isolation of chamoautotrophs,' chemoheterotrophs and photosynthetic microorganisms. Microbial Evolution, Systematic and Taxonomy, Evolution of earth and earlier life forms; Primitive organisms and their metabolic strategies and molecular coding; New approaches to bacterial taxonomy classification including ribotyping Ribosomal RNA sequencing; Characteristics of primary domains Taxonomy, Nomenclature and Bergey's Manual

UNIT II

Microbial Growth The definition of growth, mathematical expression of growth, mathematical expression of growth, growth curve, measurement of growth and growth yields; Synchronous growth; Continuous culture; Growth as affected by environmental factors like temperature, acidity, alkalinity, water availability and oxygen; Culture collection and maintenance of cultures

Overview of Basic Metabolism & Microbial Nutrition

Metabolic Diversity among Microorganisms Photosynthesis in microorganisms; Role of Chlorophylls, carotenoids and phycobilins; Calvin cycle; Chemolithotrophy; Hydrogen - iron - nitrite - oxidizing bacteria; Nitrate and sulfate reduction; Methanogenesis and acetogenesis; Fermentations - diversity, syntrophy, role of anoxic decompositions; Nitrogen metabolism;" Nitrogen fixation; Hydrocarbon transformation

UNIT III

Prokaryotic Diversity Bacteria: Purpl and green bacteria; Cyanobacteria; Homoacetogenic bacteria; Acetic acid bacteria; Budding and appendaged bacteria; Spirilla; Spirochaetes; Gliding and sheathed bacteria; Pseudomonads; Lactic and propionic acid bacteria; Endospore forming rods and cocci: Mycobacteria: Rickettsias, Chlamydiae and Mycoplasma. Archaea: Archaea as earliest Life forms: Halophiles;

Methanogens; Hyperthermophilic archaea; Thermoplasma, Eukaryotic: Algae, Fungi, Slime molds and Protozoa.

UNIT IV

Viruses: Bacterial, Plant, Animal and Tumor viruses; Discovery, classification and structure of viruses; Lysogeny: DNA viruses: Positive strand Negative strand, and double stranded RNA viruses; Replication: Examples of Herpes, Pox, Adenoviruses, Retroviruses, Viroids and Prions

Prokaryotic Cells: Structure-function Cell walls of eubacteria (peptidoglycan) and related molecules; Outer-membrane of Gram negative bacteria; Cell wall and cell membrane synthesis; Flagella and motility; Cell inclusions like endospores, gas vesicles, Chemotherapy/Antibiotics

Antimicrobial agents; Sulfa drugs; Antibiotics: Penicillins and Cephalosporins; Broad spectrum antibiotics; Antibiotics from prokaryotes; Antifungal antibiotics; Mode of action; Resistance to antibiotics

UNIT V

Genes, Mutation and Mutagenesis UV and chemical mutagenesis Types of mutation; Ames test for mutagenesis; Methods of genetic analysis

Bacterial Genetic System Transformation, Conjugation, Transduction, Recombination, Plasmids and Transposons, Bacterial genetics map with reference to E.coli

Viruses and Their Genetic System Phage I and its life cycle: RNA phages RNA viruses; Retroviruses

Genetic systems of Yeast and Neurospora

Extra-Chromosomal Inheritance

Practicals

Preparation of liquid and solid media for growth of microorganisms

Isolation and maintenance of organisms by plating, streaking and serial dilution methods. Slants and stab cultures. Storage of microorganisms

Isolation of pure cultures from soil and water

Growth; Growth curve; Measurement of bacterial population by turbidometry and serial dilution methods. Effect of temperature, pH and carbon and nitrogen sources on growth.

Microscopic examination of bacteria, yeast and molds and study of organisms by Gram stain, Acid fast stain and staining for spores

Study of mutations by Ames test.

Assay of antibiotics and demonstration of antibiotic resistance

Analysis of water for potability and determination of MPN

Bacterial transformation

Biochemical characterization of selected microbes

Transduction

One step growth curve of coliphage

Isolation of Plasmids

¹⁴C₂ fixation by photosynthetic microbes

M.Sc. Agriculture Biotechnology

Semester--I

Course Title: Molecular Biology

MM. Th 80 + IA 20

Course No. ABT 114

Time: 3h

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

UNIT I

DNA Replication: Prokaryotic and eukaryotic DNA replication, Mechanics of DNA replication, enzymes and accessory proteins involved in DNA replication and DNA repair.

Transcription: Prokaryotic transcription, Eukaryotic transcription, RNA polymerase, General and specific transcription factors, Regulatory elements in mechanisms of transcription regulation, Transcriptional and post-transcriptional gene silencing
Modifications in RNA: 5'-Cap formation, Transcription termination, 3'-end processing and polyadenylation, Splicing, Editing, Nuclear export of mRNA, mRNA stability

UNIT II

Translation: Prokaryotic and eukaryotic translation, the translation machinery, Mechanisms of initiation, elongation and termination, Regulation of translation, co- and post translational modifications of proteins.

Protein Localization: Synthesis of secretory and membrane protein, Import into nucleus, mitochondria, chloroplast and peroxisomes, Receptor mediated endocytosis
Oncogenes and Tumor Suppressor Genes: Viral and cellular oncogenes, tumor suppressor genes from humans, Structure, Function and mechanism of action of pRB and p53 tumor suppressor proteins

UNIT III

Antisense and Ribozyme Technology: Molecular mechanism of antisense molecules, inhibition of splicing, polyadenylation and translation, disruption of RNA structure and capping, Biochemistry of ribozyme; hammer head, hairpin and other ribozymes, strategies for designing ribozymes, Applications of Antisense and ribozyme technologies

Homologous Recombination: Holliday junction, gene targeting, gene disruption, FLP/FRT and Cre/Lox recombination, RecA and other recombinases

Molecular Mapping of Genome: Genetic and physical maps, physical mapping and map-based cloning, choice of mapping population, Simple sequence repeat loci, Southern and fluorescence in situ hybridization for genome analysis, Chromosome micro dissection and micro cloning.

UNIT IV

Molecular markers in genome analysis: RFLP, RAPD and AFLP analysis, Molecular markers linked to disease resistance genes, Application of RFLP in forensic, disease. prognosis, genetic counseling, Pedigree, varietal etc. Animal trafficking and poaching; Germplasm maintenance, taxonomy and Bio-diversity

UNIT V

Genome Sequencing: Genome sizes., organelle genomes, Genomic libraries, YAC, BAC libraries, Strategies for sequencing genome, Packaging, transfection and recovery of clones, Application of Sequencing sequence information for identification of defective genes

PRACTICALS

Isolation of genomic DNA

Southern blotting

RFLP analysis

Isolation of RNA

Isolation of polyA + RNA

Northern blotting

Preparation of probes

In vitro Transcription

In vitro translation

Metabolic labeling of proteins and immuno precipitation

Text/References:

M.Sc. Agriculture Biotechnology

Semester I

Course Title: Biostatistics

Course No. ABT 115

MM. Th 80 + IA 20

Time: 3h

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

Unit I

Permutation and Combination, Functions, limits and continuity, Exponential and Logarithmic functions, Vector and Matrices, Algebra of matrices, Determinants and their simple properties, Rank of matrix, Consistency of system of linear equations and solution of linear system of equations. Characteristic equation, Eigen values and Eigen vectors,

Unit II

Differential Calculus, Rules of differentiation, Derivatives of implicit functions, Parametric differentiation, Higher derivatives Taylor's theorem, Maclaurin's theorem (without proofs), Maxima and minima, Partial differentiation
Integration, Integration by parts, Definite integral, Properties of definite integrals,
Differential Equations: Separable variable, homogenous, exact and linear equations of second order.

Unit III

Concepts in statistics, Types of Data, presentation of data, types of graphics, relative frequency, cumulative frequency, Measurement of central tendency, Measures of variation, coefficient of variation, Measures of Skewness and Kurtosis, Probability and its applications, Laws of Addition and Multiplication, Compound probability, Baye's Theorem

Unit IV

Random Variables and Distributions. Binomial, Poisson, Exponential and Normal Distributions and their applications. Samples and Sampling Distribution, Standard Error, significance level, Degrees of freedom, Tests of significance, tests for proportion, t and F tests Confidence Intervals

Unit V

Contingency tables of χ^2 (Chi square) tests of goodness of fit and homogeneity.

Correlation: Simple, Partial and Multiple Correlation, Methods of averages and least squares, polynomial fitting, Regression Analysis. Analysis of variance for one and two way classification Design of experiments, randomization, replication local control, completely randomized and randomized block design.

PRACTICALS

Descriptive statistics: Systematic tabular summarization of data (before analysis), measures of central tendency, measures of dispersion, measures of skewness (using calculators).

Correlations (product-moment coefficient, Spearman's rank coefficient) and regression (linear regression, curve fitting).

Data presentation (tables/figures) : 1-D and 2-D bar charts, pie diagrams, graphs (using computer software packages).

Statistical distributions: fitting discrete uniform, binomial, Poisson and normal probability distributions to given data

Testing of hypotheses: Tests of significance (mean, standard deviation, correlation coefficient), chi-squared test for goodness of fit, test for independence of attributes, non-parametric tests (run test) using calculators and printed tables and using minitab sampling (drawing random samples using random numbers, tables, chits, computer programmes for random number generation), design of experiments, ANOVA (one-way and two-way).

M.Sc. Agriculture Biotechnology

Semester--I

Course No. ABT 116

MM. 25

Course Title: Communication Skills

Time: 0.30min

NOTE: Seminars

Lectures: preparation, objective/s, concepts, contents, sequence, formal proof, interrelationships, logic, conclusions, time management, using audiovisual aids.

Giving a talk: body language: extempore and prepared talks.

Preparing for interviews, CV/biodata.

Vocabulary: word power, pronunciations, guessing the meaning of words from the context and body language and using a dictionary

Review of basic and grammar Punctuation marks: comma, colon, semicolon, full stop, inverted comma.

Avoiding repetitious statements, double positives, double negatives, circular arguments.

Dealing with questions: avoiding circumvention and circular arguments; answering after breaking down long questions into parts.

MS power point-based presentations.

Analysis of formal presentations in the course 3a in terms of actual presentations.

Course No. ABT 211

Time: 3h

Theory Course Title: Genetic engineering

MM. Th 80 + IA 20

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

UNIT I

Scope of Genetic Engineering, Milestones in Genetic Engineering
Isolation of enzymes, DNA sequencing, synthesis and mutation, detection and separation cloning, gene expression. Cloning and patenting of life forms. Genetic engineering guidelines, Molecular Tools and Their Applications, Restriction enzymes, modification enzymes, DNA and RNA markers

UNIT II

Nucleic Acid Purification, Yield Analysis, Nucleic Acid Amplification and its Applications, Gene Cloning Vectors, Restriction Mapping of DNA Fragments and Map Construction, Nucleic Acid Sequencing, cDNA Synthesis and Cloning , mRNA enrichment, reverse transcription, DNA primers, linkers, adaptors and their chemical synthesis, Library construction and screening, Alternative Strategies of Gene Cloning

UNIT III

Cloning interacting genes-Two-and three hybrid systems, cloning differentially expressed genes. Nucleic acid microarray arrays, Site-directed Mutagenesis and Protein Engineering , How to Study Gene Regulation? DNA transfection, Northern blot, Primer extension, S1 mapping, RNase protection assay, Reporter assays, Expression strategies for heterologous genes, Vector engineering and codon optimization, host engineering, in vitro transcription and translation, expression in bacteria expression in yeast, expression in insect cells, expression in mammalian cells, expression in plants.

UNIT IV

Processing of recombinant proteins: Purification and refolding, characterization of recombinant proteins, stabilization of proteins.
Phage Display, T-DNA and Transposon Tagging
Role of gene tagging ingene analysis, T-DNA and Transposon Tagging, Identification and isolation of genes through T-DNA or Transposon.

UNIT V

Transgenic and gene knockout technologies

Targeted gene replacement, chromosome engineering.

Gene therapy: Vector engineering strategies of gene delivery, gene replacement/augmentation, gene correction, gene editing, gene regulation and silencing.

PRACTICALS

Bacterial culture and antibiotic selection medias. Prepration of competent cells.

Isolation of plasmid DNA.

Isolation of lambda phage DNA .

Quantitation of nucleic acids.

Agarose gel electrophoresis and restriction mapping of DNA

Construction of restriction map of plasmid DNA.

Cloning In plasmid/phagemid vectors.

Preparation, of helper phage and its titration\

Preparation of single stranded DNA template

DNA sequencing

Gene expression in E. coli and analysis of gene product

PCR and Reporter Gene assay (Gus/CAT/b-GAL)

M.Sc. Agriculture Biotechnology

Semester—II

Course Title: Bioinformatics

MM. Th 80 + IA 20

Course No. ABT 212

Time: 3h

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

UNIT I

Computers: An overview of computers, microcomputers, VDUs and printer. What is programming? Algorithms. Languages and packages: Introduction to MS Office, MS Access, Front Page and introduction to C, Java and SQL (structured query language) Handling arrays, procedures, Colour, sound and graphics. Use of standard packages.

UNIT II

Introduction to PERL: Scalar variables, strings and numbers, Assignment statements, Arrays, Hashes, Operators, Input from file, Standard Input, Conditional and logical operators, loops, I/O, Input from file named in command line, Regular expression, Pattern matching, Meta symbols, Pattern modifiers, Subroutines.

Applications of PERL in Bioinformatics: Storing DNA sequence, DNA to RNA transcription, Finding motifs, Counting nucleotides, Generating random numbers, simulating DNA mutation, generating random DNA, Analyzing DNA

UNIT III

Biological Sequence Databases: Overview of various primary and secondary databases that deal with protein and nucleic acid sequences. Databases to be covered in detail are GenBank, EMBL, DDBJ, Swiss Prot, PIR, and MIPS for primary sequences. Various specialized databases like TIGR, Hovergen, TAIR, PlasmDB, ECDC etc., will also be discussed. Preliminary ideas of query and analysis of sequence information.

UNIT IV

Sequence Comparison Methods: Method for the comparison of two sequences viz., Dot matrix plots, Needleman Wunsch & Smith Waterman algorithms. Analysis of computational complexities and the relative merits and demerits of each method. Theory of scoring matrices and their use for sequence comparison.

UNIT V

Database Search Algorithms: Methods for searching sequence databases like FASTA and BLAST algorithms. Statistical analysis and evaluation of BLAST results.

Pattern Recognition Methods in Sequence Analysis: Concept of a sequence pattern, regular expression based patterns. The use of pattern databases like PROSITE and PRINTS. Concept of position specific weight matrices and their use in sequence analysis. Theory of profiles and their use with special reference to PSIBLAST. Markov chains and Markov models and their use in gene finding. Concept of HMMS, the Forward backward and the Viterbi algorithm. The Baum Welch algorithm for training a HMM. Use of profile HMM for protein family classification.

Practical

Computational modeling of genomic proteomic, evolutionary tree designing on databases, network search on genomic and proteomic databases.

M.Sc. Agriculture Biotechnology

Semester—II

Course Title: Molecular Breeding

MM. Th 80 + IA 20

Course No. ABT 213

Time: 3hrs

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

Unit I

Conventional methods for crop improvement: Principles of plant breeding, Breeding methods for self and cross pollinated crops, Heterosis breeding, Mutation breeding, Limitations of conventional breeding

Unit II

Plant Genome – Nuclear and cytoplasmic; Significance of organelle genomes; Genome size and sequence components; Modern gene concept - Gene structure, structural and functional genes. Molecular markers: Definition, properties, kinds of molecular markers: – Restriction based and PCR based; RFLP: methodology and applications, RAPD & AFLP: Principles, methodology and applications, Development of SCAR and SSR markers. Other markers: CAPS, SNP, Comparison of different marker systems

Unit III

Gene flow in plants – Development of mapping population – Marker Assisted Selection (MAS), screening and validation; Trait related markers and characterization of genes involved; Mapping genes on specific chromosomes; QTL mapping; Gene pyramiding; Transcript mapping techniques. Development of ESTs

Unit IV

Molecular markers for plant genotyping and germplasm analysis; Fidelity analysis; settling IPR issues; Marker Assisted Breeding in transgenics – herbicide resistance; Pest and disease resistance; Quality enhancement etc. Allel mining, TILLING, EcoTILLING.

Unit V

Recent advances – Non gel based techniques for plant genotyping – Homogenous assays – Qualitative/Real Time assays; DNA Chip and its technology.

Practicals

1. DNA extraction and DNA estimation from plants
2. PCR analysis,
3. DNA finger printing methods, RAPD, SSR.

Texts/References:

1. Anolles, G. C. and Gresshoff, P.M., DNA markers – protocols, applications and overviews. Wiley – Liss, New York, 1997

M.Sc. Agriculture Biotechnology

Semester—II

Course Title: Plant Molecular Biology

MM. Th 80 + IA 20

Course No. ABT 214

Time: 3h

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

Unit I

General Aspects; Novel features of plant growth and development; Concept of plasticity in plant development; Analyzing plant growth; Seed Germination and Seedling Growth; Mobilization of food reserves during seed germination; Tropisms; Hormonal control of seed germination and seedling growth. Floral Induction and Development; Photoperiodism and its significance; Vernalization and hormonal control; Inflorescence and floral determination; Molecular genetics of floral development and floral organ differentiation; Sex determination.

Unit II

Carbon Assimilation; Light absorption and energy conversion; Calvin Cycle; Hatch-Slack pathway; Reductive pentose phosphate pathway; Carbon dioxide uptake and assimilation; Photorespiration; Glycolate metabolism. Molecular biology of photosynthetic processes

Nitrogen Fixation -- Symbiotic and non-symbiotic nitrogen fixation; Role of lectins; nod genes; nif genes; Structure, function and regulation of nitrogenase; Leghaemoglobin; Nodulins; Molecular aspects of regulation and enhancement of nitrogen fixation. Mycorrhizal-plant symbiosis.

Unit III

Nitrogen, sulphur and phosphorus metabolism: General aspects of nitrogen economy, Nitrate reduction, Pathways of ammonia assimilation, transamination, Regulation of nitrogen assimilation, uptake, transport and assimilation of sulphate and phosphate.

Long-distance Transport Mechanisms – Turgor and stomatal movements; Solute movement; Source-sink relationship; Water relations.

Unit IV

Senescence and Programmed Cell Death (PCD) – Senescence and its regulation; Hormonal and environmental control of senescence; PCD in the life cycle of plants.

Signal Transduction – Basic concepts; Receptors and G-proteins; Cyclic AMP cascade; Phospholipid and Ca²⁺-calmodulin cascade; MAP kinase cascade; Two-component sensor-regulator system; Sucrose sensing mechanism

Unit V

Biosynthesis of Plant Hormones and Elicitors; Structure and metabolism of auxins, gibberellins, cytokinins, abscisic acid, ethylene, brassinosteroids, salicylic acid, jasmonates and related compounds.

Molecular Mechanism of Hormone Action – Hormone signal perception, transduction and gene regulation; Role of mutants in understanding hormone action.

Light Control of Plant Development – Discovery of phytochromes and cryptochromes, their structure, biochemical properties and cellular distribution; Molecular mechanisms of light perception, signal transduction and gene regulation; Biological clocks and their genetic and molecular determinants.

Practicals

1. Plant DNA extraction, digestion of DNA with restriction enzymes, agarose gel electrophoresis.
2. Polymerase chain reaction to amplify a plant gene.
3. Homogenization of leaves, sub-cellular fractionation by differential centrifugation, chloroplast purification, SDS-PAGE analysis of chloroplast proteins.
4. RNA extraction, Agarose gel electrophoresis of RNA, RT-PCR analysis of a plant gene.

Course Title: Plant Tissue Culture

MM. Th 80 + IA 20

Course No. ABT 215

Time: 3hrs

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

Unit I

History of plant cell and tissue culture, Culture media; Various types of cultures: callus, cell suspension, nurse, root, meristem, *In Vitro* differentiation: Organogenesis and somatic embryogenesis; Molecular basis of plant organ differentiation Micro-propagation – plant multiplication, hardening, transplantation, genetic fidelity, scale up and cost reduction, bioreactor, artificial seeds; Applications of tissue culture: Virus elimination by shoot tip culture;

Unit II

In vitro pollination and fertilization, Wide hybridization and Embryo rescue, Androgenesis: Anther and pollen culture, Gynogenesis-ovule and ovary culture, dihaploids, their applications in genetics and plant breeding;

Unit III

Protoplast isolation and purification; Protoplast viability test; Protoplast culture and regeneration; Somatic hybridization - methods and applications; Cybrids, Somaclonal and gametoclonal variations, *In vitro* selection.

Unit IV

Large-scale production of alkaloids and other secondary metabolites through cell culture techniques; high yielding cell lines, factors effecting production, Biotransformation, elicitors induced production, Hairy root culture and production of secondary metabolites. Immobilization of plant cells.

Unit V

Plant Genetic resources, Germplasm conservation and cryopreservation, cryoprotectants, Gene bank, Some case studies on success stories on commercial application of plant tissue culture.

Practicals

1. Preparation of Murashige and Skoog medium, stocks of macronutrients, micronutrients, vitamins and hormones, autoclaving, filter sterilization of hormones and antibiotics.
2. Surface-sterilization of seeds, establishment of axenic plants, acclimatization of tissue culture plants and establishment in greenhouse.
3. Callus induction in tobacco leaf discs, regeneration of shoots, root induction, role of hormones in morphogenesis.
4. Anther culture
5. Protoplast isolation viability test and culture

Texts/References:

1. R.H.Smith, Plant Tissue Culture: Techniques and Experiments, Academic Press, San Diego. 1992.
2. S S Bhojwani and M K Razdan, Plant Tissue Culture, Elsevier Publ.

Course Title: Plant Genetic Engineering

MM. Th 80 + IA 20

Course No. ABT 311

Time: 3hrs

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

Unit I

Agrobacterium-plant interaction; Virulence; Ti and Ri plasmids; Opines and their significance; T-DNA transfer; Disarming the Ti plasmid, *Agrobacterium*-mediated gene delivery, Cointegrate and binary vectors and their utility; Flower dip transformation, Direct gene transfer - PEG-mediated, electroporation, particle bombardment and alternative methods; Screenable and selectable markers; Monocot transformation, Promoters and poly A signals, Characterization of transgenics; Chloroplast transformation: advantages, vectors and successes; Marker-free methodologies; Gene stability and gene silencing, gene stacking,

Unit II

Bacterial resistance, Viral resistance : coat protein mediated, nucleocapsid gene, Fungal diseases: chitinase, 1-3 beta glucanase, RIP, antifungal proteins, thionins, PR proteins, Insect pests resistance: Bt genes, Non-Bt like protease inhibitors, alpha amylase inhibitor, nematodes resistance and herbicide resistance: phosphinothricin, glyphosate, sulfonyl urea, atrazine, Drought, salinity, thermal stress, flooding and submergence tolerance, post-harvest losses, long shelf life of fruits and flowers: use of ACC synthase, Polygalacturanase, ACC oxidase, male sterile lines: bar and barnase systems.

Unit III

Genetic engineering for increasing crop productivity: enhancing photosynthetic, nutrient use and nitrogen fixing efficiencies of plants, manipulation of plant architecture and flowering behavior

Unit IV

Genetic Engineering for quality improvement: Seed storage proteins; essential amino acids, Vitamins and minerals, heterologous protein production in transgenic plants for agriculture, industry and pharmaceuticals uses, biodegradable plastics, Plants as biofactories

Unit V

Role of antisense and RNAi in crop improvement, regulated and tissue specific expression of transgenes for crop improvement, Terminator gene technology, Environmental issues associated with transgenic crops, food safety issues and risk assessment of transgenic food crops.

Practicals

1. Isolation of plasmids with reporter (*gus*) gene,
2. Preparation of microprojectiles, transformation using a particle gun, GUS staining.
3. Leaf disc transformation using *Agrobacterium*, establishment of transgenic plants, and GUS staining or GFP viewing.
4. DNA extraction from transgenic plants, DNA estimation, PCR analysis,
5. Southern blot analysis to prove T-DNA integration,
6. RTPCR to study transgene expression,
7. Western blotting to study the accumulation of transgene-encoded protein.

M.Sc. Agriculture Biotechnology

SEMESTER-III

Course Title: Plant Metabolic Engineering and Molecular Farming,

Course No. ABT 312

MM. Th 80 + IA 20

Time: 3hrs

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

UNIT I

Basic concepts of Metabolic Engineering – Overview of cellular metabolism; Different models for cellular reaction.

PRIMARY METABOLITES giving special attention to sugars, amino acids and lipids: The basic structure, The biochemical pathway, Carbon flow, Different regulatory points (regulation at enzyme level and whole cell level, Alteration of feed back regulation, Limiting accumulation of end products), Genetic manipulation of starch, amino acids and oil content in plants and their value addition with significance in horticulture, agriculture and medicine

UNIT II

SECONDARY METABOLITES giving special emphasis to following components of Flavanoid pathway, Terpenoid pathway, Polyketoid pathway: The basic structure, The biochemical pathway, Carbon flow, Different regulatory points (regulation at enzyme level and whole cell level, Alteration of feed back regulation, Limiting accumulation of end products), Genetic manipulation of flavonoid pathway, Terpenoid and Polyketoid pathways in plants and their value addition with significance in horticulture, agriculture and medicine

UNIT III

Metabolic Profiling & Transcription Factors for Metabolic Engineering

Metabolic Engineering to improve tolerance of plants to abiotic factors/climate change

UNIT IV

Metabolic flux - Integration of anabolism and catabolism, metabolic flux distribution analysis bioprocess, material balance, kinetic types, equilibrium reaction. Experimental determination method of flux distribution, metabolic flux analysis and its applications, Metabolic engineering with Bioinformatics, Analysis of metabolic control and the structure, metabolic networks, metabolic pathway synthesis algorithms

UNIT V

Applications of Metabolic Engineering - in pharmaceuticals (edible vaccines, plantibodies etc), chemical bioprocess, food technology, nutraceuticals, agriculture, biofuels, and biomass conversion. Bioenergy generation, Bioethanol and biohydrogen;

Practical

Development of high yielding microbes/plants by chemical mutagens:

Development technique for production for transgenic microbes/plant:

Cloning technique used in secondary metabolite expression in microbes/plants.

Secondary metabolite extraction and purification from microbes/plants.

M.Sc. Agriculture Biotechnology

Semester—III

Course Title: Genomics and Proteomics

MM. Th 80 + IA 20

Course No. ABT 313

Time: 3h

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

Unit I

Introduction

Structural organization of genome in Prokaryotes and Eukaryotes; Organelle DNA-mitochondrial, chloroplast; DNA sequencing principles and translation to large scale projects; Recognition of coding and non-coding sequences and gene annotation; Tools for genome analysis-RFLP, DNA fingerprinting, RAPD, PCR, Linkage and Pedigree analysis-physical and genetic mapping: **Physical mapping of genome:** Conventional cytogenetics, Physical mapping by restriction hybridization analysis, FISH and related techniques, Chromosome painting and microdissection, Long range physical mapping Contig assembly, Chromosome walking and map-based cloning.

Unit II

Genome sequencing projects

Microbes, plants and animals; Accessing and retrieving genome project information from web; Identification and classification using molecular markers-16S rRNA typing/sequencing, EST's and SNP's.

Comparative-genomics

Introduction, comparative genomics of plants, cereal and legume comparative genomics

Evolutionary Genomics

Introduction to genome evolution, Acquisition of new genes, Evolution of non-coding regions, Molecular phylogenetics and applications, Evolution of multigene families in the genome

Unit III

Proteomics

Protein analysis (includes measurement of concentration, aminoacid composition, N-terminal sequencing); 2-D electrophoresis of proteins; Microscale solution isoelectric-focusing; Peptide fingerprinting; LC/MS-MS for identification of proteins and modified proteins; MALDI-TOF; SAGE and Differential display proteomics, Protein-protein interactions, Yeast two hybrid system.

Unit IV

Pharmacogenetics

High throughput screening in genome for drug discovery identification of gene targets, Pharmacogenetics and drug development

Unit V

Functional genomics and proteomics

Introduction, Strategies to find functional genes in the genome, Gene tagging strategies and application. ESTs and its utility in genomics, Differential gene profiling methods, DNA chips/Microarrays, SAGE and SNPs analysis, Protein and peptide microarray-based technology; PCR-directed protein *in situ* arrays; Structural proteomics

M.Sc. Agriculture Biotechnology

Semester—III

Course Title: Biotic and abiotic stress biology

MM. Th 80 + IA 20

Course No. ABT 314

Time: 3hrs

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

Unit I

Climate change: impact of global climate change on agricultural production, reduced green house gas emission from agri-practices, UV-B radiation, Ozone depletion; Green house effect; effect of increased CO₂ and high O₃ on crop productivity and target for crop biotechnology, Exploitation of plant –microbes partnership for improving biomass and remediation: Biocomposting; Biofertilizers; Slow release fertilizers, Vermiculture; Organic farming; Biopesticides: microbes and plants, Biominearization

Unit II

Pollution

Enviromental pollution; Source of pollution; Air, water as a source of natural resource; Hydrocarbons, substituted hydro carbons; Oil pollution; Surfactants; Pesticides; Measurement of pollution; Water pollution; Biofilm; Soil pollution; Radioactive pollution; Impact of pollutants; Measurement techniques; Pollution of milk and aquatic animals

Unit III

Control, remediation and management

Waste water collection; control and management; Waste water treatment; Sewage treatment through chemical, microbial and biotech techniques; Anaerobic processes; Anaerobic filters; Anaerobic sludge blanket reactors; Bioremediation of organic pollutants and odorous compounds; Use of bacteria, fungi, plants, enzymes, and GE organisms; Plasmid borne metabolic treatment; Bioaugmentation; Treatment for waste water from dairy, distillery, tannery, sugar and antibiotic industries, solid waste treatment

Unit III

Abiotic stress –Physiological and molecular responses of plants to water stress, salinity stress, temperature stress – heat and cold, Photooxidative stress, stress perception and stress signaling pathways, Ionic and osmotic homeostasis, reactive oxygen species scavenging, functional genomics, metabolomics and system biology of stress, miRNA in abiotic stress, Overcoming stress: breeding efforts, marker assisted breeding, transgenic approaches.

Unit IV

Introduction to plant nutrition; Mineral availability, uptake of minerals; Responses of plants to nutrient deficiency - Phosphorous and Iron deficiencies, heavy metal stress and non optimal pH-acid and calcareous soil, aluminum tolerance, Physiological and molecular biology of heavy metal tolerance. Bioremediation of contaminated soils and waste land; Bioremediation of contaminated ground water; Macrophytes in water treatment; Phytoremediation of soil metals

Unit V

Biotic stress - plant interaction with bacterial, viral and fungal pathogens and herbivores, plant responses to pathogen and herbivores– biochemical and molecular basis of host plant resistance – toxins of fungi and bacteria – systemic and induced resistance – pathogen derived resistance – signaling - gene for gene hypothesis – genetic engineering for biotic stress resistance – gene pyramiding, biotic stress associated miRNA.

Practicals

1. Laboratory techniques to measure water and nutrient uptake in plants.
2. Methods to measure various physiological processes (photosynthesis, transpiration, gas exchange, stomatal conductance, epicuticular wax, Chlorophyll stability index, cell membrane stability) in plants – methods to quantify endogenous hormones (auxin, ABA etc.) and Proline in plants
3. Rapid screening tests for abiotic stress tolerance (drought, salinity - PEG, Mannitol & NaCl)
4. Estimation of antioxidants and antioxidant enzymes - Ascorbate, Superoxide dismutase, Catalase, and Peroxidase
5. Major insect, nematode pests and diseases of crop plants – study of phytotoxaemia and other categories of insect damage in crop plants
6. Toxin – production - extraction - purification - selection of toxin resistant calli- assay of toxins to pathogens - bioassay for PR protein - culturing and isolation of *Bt* - bioassay techniques

M.Sc. Agriculture Biotechnology

Semester—III

Course Title: Industrial and Food Biotechnology

Course No. ABT 315

MM- Th 80 + IA 20

Time: 3hrs

In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Unit I

Industrial and Food Biotechnology; Introduction; History; Importance; Applications of biotechnology in food processing; Significant advances; Recent developments; Risk factors; Safety regulations etc.

Unit II

Bioprocessing – Basic principles in bioprocess technology; Media Formulation; Sterilization; Thermal death kinetics; Batch and continuous sterilization systems; Bioprocess control and monitoring variables such as temperature, agitation, pressure, pH Microbial processes-production, optimization, screening, strain improvement, factors affecting down stream processing and recovery; Representative examples of ethanol, organic acids, antibiotics etc. Industrial use of micro organisms; Microbes exploited commercially- *Saccharomyces*, *Lactobacillus*, *Penicillium*, *Acetobactor*, *Bifidobacterium*, *Lactococcus*, *Streptococcus* etc, Dairy fermentation and fermented products

Unit III

Microbial enzymes in food processing; Industrial production of enzymes -proteases and cellulases; Food and beverage fermentation- alcoholic and non alcoholic beverages; Food additives and supplements – probiotics, health care products, vitamins and antibiotics; Fuels and industrial chemicals- Alkanes, industrial ethanol etc.

Unit IV

Modification of microbes/enzymes – Strain improvement, enzyme/ cofactor engineering; Technologies for microbial inactivation; Applications in product development/improvement.

Unit V

Cell immobilization for product enhancement – Classic examples; Biosensors and Bioprocess monitoring; Model systems and process control

Practical

Isolation of industrially important microorganisms for microbial processes
Determination of thermal death point (TDP) and thermal death time (TOT) of

microorganism for design of a sterilizer

(a) Determination of growth curve of a supplied microorganism and also determines substrate degradation profile.

(b) Compute specific growth rate (μ), growth yield ($Y_{x/s}$) from the above

Comparative studies of Ethanol production using different substrates

Microbial production of Citric acid using *Aspergillus niger*.

Microbial production of antibiotics (Penicillin)

Production and estimation of Alkaline Protease

Sauer Krant fermentation

M.Sc. Agriculture Biotechnology

Semester—IV

Course Title: Management Issues in Biotechnology
Course No. ABT 411A

MM- Th 80 + IA 20
Time: 3hrs

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Theory

Unit I

Introduction to Biotechnology, Structure of a Biotechnology Company, Scientific Principles, Start-up of Biotechnology Company, New Product Development, Management Styles and Strategies,

Unit II

Sales & Marketing Principles, Sales & Marketing Principles, Intellectual Property, Principles in Biotechnology, Legal Issues in Biotechnology, Moral Issues in Biotechnology

Unit III

Health Care Overview and Reimbursement in Biotechnology
(The concept of return investment), Business Communication, Managerial Economics
Human Resource Management,

Unit IV

Management Information Systems, Logistics & Supply Chain Management, Decision Science, Sales and Distribution, Financial and Cost Accounting,

Unit V

Intellectual Property Rights, Fundamentals of Marketing, Research Methodology, Principles of Management, Marketing Management, Strategic Management

Semester--IV

Course Title: Ethical, Legal, Social issues in Biotechnology

Course No. ABT 412

MM- Th 80 + IA 20

Time: 3hrs

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Unit-I

Introduction- causes of unethical acts, ignorance of laws, codes, policies and Procedures, recognition, friendship, personal gains, Professional ethics-professional conduct.

Unit-II

Ethical decision making, ethical dilemmas good laboratory practices, good manufacturing practices, laboratory accreditation.

Unit-III

Social- genetic discrimination: insurance and employment, human cloning & its impart on feticide sex determination

Unit-IV

Ethical: somatic and germ line gene therapy, clinical trials, the right to information, ethics committee function. Social and ethical issues.

Unit-V

Biosafety- Definition, Requirement, Containment facilities, biohazards, genetically modified organisms (GMOs) living modified organisms (LMOs), Biosafety for human health and environment designing and management of laboratory and culture room as per the norm of GLP, GMO and FDA.

Semester--IV

Course Title: Bioentrepreneurship

Course No. ABT 412

MM- Th 80 + IA 20

Time: 3hrs

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Unit-I

Introduction: Creativity & Entrepreneurial personality and Entrepreneurship in Biotechnology, Concept and theories of Entrepreneurship, Entrepreneurial traits and motivation, Nature and importance of Entrepreneurs, Government schemes for commercialization of technology (Eg. Biotech Consortium)

Unit-II

Project management: Search for a business idea, concept of project and classification, project identification, project formulation, project design and network analysis, project report, project appraisal.

Unit-III

Financial analysis: Ratio analysis, Investment process, Break even analysis, Profitability analysis, Budget and planning process.

Unit-IV

Sources of finance: Source of development finance, Project financing, Institutional financing to Entrepreneurs, Financial institutions, Role of consultancy organizations.

Marketing channels: Methods of marketing, marketing channels, Marketing institutions and assistance.

Unit-V

Biotech enterprises: Setting up Small, Medium & Large scale industry, Quality control in Biotech industries, Location of an enterprise, steps for starting a small industry, incentives and subsidies, exploring export possibilities.

Semester--IV

Course Title: IPR and Biotechnology
Course No. ABT 411

MM- Th 80 + IA 20
Time: 3hrs

NOTE: In all ten questions will be set, two from each unit. Students are required to attempt five questions i.e. one from each unit.

Unit-I

Intellectual property rights: Meaning,-Evolution-Classification and forms, Rationale for protection of IPRs- Importance of IPRs in the field of science and technology. Scientific and Commercial breakthroughs of Biotechnology at national and intellectual level.

Unit-II

Intellectual Property: A Copy Right & Industrial Properties, Trademarks, Designs, Geographical Indications; IPR & Technology transfer, Role of patentee & Licensor, Breakthroughs of IPR at National and International level.

Unit-III

Patents-Concepts and principles of patenting-Patentable subject matter; Procedure of obtaining patents- Rights of patents- Infringement of patent rights; Remedies for infringement of patent rights- Patentability and emerging issues.

Unit-IV

Patentability of life forms with special refernce to Microorganisms, Pharmaceutical industries Biodiversity, naturally occurring substances.

Unit-V

Human genome and IPR, in Public-Private partnership, Government Policies at National and International level in patenting IPR. Availability of Patent facilitating funds, Subtentative Patent Law Treaty, (SPLT), Word Patent, European Patent.
