

**ORDINANCE FOR BACHELOR OF PHARMACY
(SEMESTER SCHEME)**

1. There shall be a course leading to Bachelor of Pharmacy degree under the Department of Pharmaceutical Sciences, in Faculty of Pharmaceutical Sciences.
2. A person who has passed the following examination shall be eligible to join the First Semester of Bachelor of Pharmacy Course :
The candidate must have passed :
10 + 2 examination of the Board of School Education, Haryana, Bhiwani, or any other Board / University, recognized by this University, with Physics and Chemistry as compulsory subjects, along with any one of the subjects, viz., Mathematics / Biology / Biotechnology / Computer Science.
3. The duration of the course of instruction for the degree of Bachelor of Pharmacy shall be of eight semesters, spread over four academic years. Each academic year shall be divided into two semesters, each semester extending to about 14-16 weeks. The first academic year will consist of First & Second Semesters, the second academic year will consist of Third & Fourth Semesters, and so on. At the end of each semester, there shall be an examination wherein candidates will be examined in the courses prescribed for that semester and the semester examination shall be designated as First Semester Examination, Second Semester Examination, and so on. The examination for all odd semesters shall be held in Dec./Jan. and for all even semesters in May/June, OR on such dates as may be fixed by the University.
4. A supplementary examination shall be held ordinarily in the month of May/June and in Dec./Jan. OR on such dates as may be fixed by the University. There will be no separate supplementary examination and the candidates will be allowed to appear in the supplementary examination, wherever admissible, along with the Main Semester examinations.
5. For the purpose of promotion, the course shall be divided into four parts, viz., Part I, II, III and IV. Part I shall comprise of First & Second Semesters, Part II shall comprise of Third & Fourth Semesters, Part III shall comprise of Fifth & Sixth Semesters and Part IV shall comprise of Seventh and Eighth Semesters.
6. For the purpose of promotion, each theory and practical in any subject shall be considered as separate paper.
7. For promotion from Part I B. Pharmacy to Part II of B. Pharmacy, a candidate must qualify at least 50 % papers of Part I B. Pharmacy (First & Second Semester taken together). For promotion from Part II B. Pharmacy to Part III B. Pharmacy, a candidate must qualify at least 50 % papers of Part II B. Pharmacy (Third & Fourth Semester taken together) and all papers of Part I B. Pharmacy (First & Second Semester taken together). Hence, if a candidate fails to qualify any paper of Part I B. Pharmacy (First & Second Semester taken together), he / she will not be allowed to be admitted in Part III B. Pharmacy.
8. For promotion from Part III B. Pharmacy to Part IV B. Pharmacy, a candidate must qualify at least 50 % papers of Part III B. Pharmacy (Fifth & Sixth Semesters taken together) and all papers of Part I B. Pharmacy and Part II B. Pharmacy. Thus, any candidate who fails to qualify any paper of Part I B. Pharmacy or Part II B. Pharmacy, shall not be allowed to be admitted in Part IV B. Pharmacy.
Provided further that a candidate who has paid dues for the higher class and is dropped for want to fulfillment of any of the above conditions shall not be required to pay the dues again on re-admission after fulfillment of above conditions.
9. The candidate must pass the Final (Eighth) Semester Examination within seven years of his / her admission to the First Semester of the Course. A candidate who fails to pass the Bachelor of Pharmacy course, within a period of seven years of his / her admission to the course, shall be deemed to be unfit for the course.
10. A candidate who fails to pass or fails to qualify for promotion to the next higher class on the result of Supplementary Examination, shall become an Ex-student, till such period he / she becomes eligible (in subsequent Main / Supplementary Examination) for admission / promotion to the next higher class. If he / she scores pass marks in the higher examination, his / her results for the same will be declared provisionally, subject to his / her passing in the lower examination. While reappearing in the examination, the candidate shall be exempted from appearing in paper(s) and / or practical(s) in which he / she has obtained at least 50 % marks. He / she will also retain the sessional marks of the previous examination.
11. Lateral Entry to the Third Semester B. Pharmacy shall be open to the candidates who have qualified Diploma in Pharmacy course, from any institute approved by Pharmacy Council of India, New Delhi, obtaining at least 55 % marks in aggregate in D. Pharmacy. Admission in the Lateral Entry Scheme shall be made, as per rules admissible at the time.
12. 20 marks in each subject (theory and practical separately) will be reserved for internal assessment. In theory, these marks will be based upon the average of marks obtained during two sessional examinations conducted during each semester. In case of practicals, these marks will be based upon

day to day assessment of practical work, viva, laboratory record, etc. There will be no sessional practical examinations.

13. 10 marks in each subject (theory and practicals separately) will be awarded on the basis of attendance of the candidate, in each semester.
14. The main examination in each theory subject shall be of 70 marks, with the following distribution of marks :

| Each Question shall be of 14 marks ; Total Marks = 70 | | |
|---|------------------------------|---|
| Question One | Covering the entire syllabus | Short answer type questions |
| Question Two | Covering the Unit One | Any one question, out of two questions, need to be answered |
| Question Three | | |
| Question Four | Covering the Unit Two | Any one question, out of two questions, need to be answered |
| Question Five | | |
| Question Six | Covering the Unit Three | Any one question, out of two questions, need to be answered |
| Question Seven | | |
| Question Eight | Covering the Unit Four | Any one question, out of two questions, need to be answered |
| Question Nine | | |

15. All the theory papers in any semester shall be set by external examiners in accordance with the procedure laid down by the University. The theory answer sheets shall be evaluated by the examiner who has set the question paper. In each practical paper, there shall be at least one External Examiner and one Internal Examiner (concerned subject teacher within the department). The panel of external examiners for the theory / practicals shall be recommended by the Board of Studies. However, in case an external examiner is not available for setting of theory question paper / evaluation of theory answer sheets / conducting the practical examination, the Chairman, Board of Studies may be authorized to

appoint a substitute examiner, from within the department / outside from any neighbouring colleges / University.

16. The examination shall be open to the person
- who has been on the rolls of the department admitted to the privileges of the University throughout the academic year preceding the examination ; and
 - whose name is submitted to the Registrar / Controller of Examinations by the Head of the Department, having most recently attended and produced the following certificates signed by him :
 - of possessing good character,
 - of having remained on the rolls of the department during the year preceding the examination and of having attended not less than 75 % of the full course of lectures delivered in each subject and 75 % of the periods assigned to practical work in each subject (the course to be counted upto the last day when the classes break up for the preparatory holidays). However, the Head of the Department may, in bonafide cases, condone deficiency in lectures as per University Rules.
17. Every candidate shall be examined according to the Scheme of Examinations and Syllabus as approved by the Academic Council, from time to time.
18. The amount of Examination Fees to be paid by the candidate for each examination shall be prescribed by the University.
19. A candidate who reappears in one or more paper(s) / practical(s) for the purpose of passing the examination shall pay fees as for the whole examination.
20. The medium of instruction and examination shall be English.
21. The minimum number of marks required to pass the examination shall be as under :
- 50 % in theory paper (including sessionals and attendance)
 - 50 % in practicals (including sessionals and attendance)
 - 50 % in aggregate.
22. The successful candidates shall be classified into three divisions and the division obtained by the candidate will be included in their degree, as given under :
- Candidate who passes all the four parts of the examination obtaining 75 % or more marks of the total aggregate shall be declared to have passed with distinction.
 - Candidate who obtains 60 % or more of the aggregate number of marks in all the subjects in Part I, II, III & IV B. Pharmacy examination, taken together, shall be placed in First Division.

- c. Candidate who obtains 50 % or more (but less than 60 %) of the aggregate number of marks in all the subjects in Part I, II, III & IV B. Pharmacy examination, taken together, shall be placed in Second Division.

For the candidates admitted into Part II B. Pharmacy under the Lateral Entry Scheme, the aggregate of D. Pharmacy and Part II, III & IV B. Pharmacy shall be considered for the purpose of determining the division.

23. There will be no improvement facilities to Bachelor of Pharmacy students. However, the grace marks will be allowed, as per University Rules.
24. Notwithstanding the integrated nature of Bachelor of Pharmacy course which is spread over more than one academic year, the Ordinance in force at the time a student joins the course shall hold good only for the examination(s) held during / or at the end of the academic year and nothing in these ordinances shall be deemed to debar the University from amending the Ordinance subsequently and the amended Ordinance, if any, shall apply to all students, whether old or new.

PROPOSED SEMESTER SCHEME FOR B. PHARMACY
SCHEME OF EXAMINATIONS

B. Pharm. I st Semester

| S. No. | Name of the subject | Maximum Marks | Maximum Marks |
|---------|--|---------------|---------------|
| | | Theory | Practicals |
| BPH-1.1 | Pharmaceutics I (Dispensing Pharmacy) | 100 | 100 |
| BPH-1.2 | Pharmaceutical Chemistry I (Inorganic Chem.) | 100 | 100 |
| BPH-1.3 | Pharmacology I (Anatomy & Physiology) | 100 | 100 |
| BPH-1.4 | Remedial Biology * | 100 * | 100 * |
| | Total = | 300 | 300 |

* Only for PCM candidates; qualifying paper only; marks not to be counted for merit.

Total marks in I st Semester = 600

B. Pharm. II nd Semester

| S. No. | Name of the subject | Maximum Marks | Maximum Marks |
|---------|---|---------------|---------------|
| | | Theory | Practicals |
| BPH-2.1 | Pharmaceutics II (General Pharmacy) | 100 | 100 |
| BPH-2.2 | Pharmaceutical Chemistry II (Organic chemistry) | 100 | 100 |
| BPH-2.3 | Pharmacognosy I | 100 | 100 |
| BPH-2.4 | Pharmaceutical Chemistry III (Physical Chemistry) | 100 | 100 |
| | Total = | 400 | 400 |

Total marks in II nd Semester = 800

B. Pharm. III rd Semester

| S. No. | Name of the subject | Maximum Marks | Maximum Marks |
|---------|--|---------------|---------------|
| | | Theory | Practicals |
| BPH-3.1 | Pharmaceutics III (Pharmaceutical Engineering I) | 100 | 100 |
| BPH-3.2 | Pharmaceutical Chemistry IV (Pharm.Biochemistry) | 100 | 100 |
| BPH-3.3 | Pharmacognosy II | 100 | 100 |
| BPH-3.4 | Pharmaceutical Chemistry V (Chemistry of Natural Products) | 100 | -- |
| BPH-3.5 | Environmental Studies * | 100* | -- |
| | Total = | 400 | 300 |

* Qualifying paper only; marks not to be counted for merit.

Total marks in III rd Semester = 700

B. Pharm. IV th Semester

| S. No. | Name of the subject | Maximum Marks | Maximum Marks |
|---------|--|---------------|---------------|
| | | Theory | Practicals |
| BPH-4.1 | Pharmaceutical Chemistry VI (Anal. Chem I) | 100 | 100 |
| BPH-4.2 | Pharmaceutics IV (Pharmaceutical Microbiology) | 100 | 100 |
| BPH-4.3 | Computer Sciences | 100 | 100 |
| BPH-4.4 | Pharmaceutical Mathematics and Statistics | 100 | -- |
| | Total = | 400 | 300 |

Total marks in IV th Semester = 700

B. Pharm. V th Semester

| S. No. | Name of the subject | Maximum Marks | Maximum Marks |
|---------|--|---------------|---------------|
| | | Theory | Practicals |
| BPH-5.1 | Pharmaceutics V (Physical Pharmacy) | 100 | 100 |
| BPH-5.2 | Pharmaceutical Chemistry VII (Medicinal Chemistry I) | 100 | 100 |
| BPH-5.3 | Pharmaceutics VI (Pharmaceutical Engineering II) | 100 | 100 |
| BPH-5.4 | Pharmacology II (Pathophysiology) | 100 | -- |
| BPH-5.5 | Pharmaceutics VII (Pharmaceutical Management) | 100 | -- |
| | Total = | 500 | 300 |

Total marks in V th Semester = 800

B. Pharm. VI th Semester

| S. No. | Name of the subject | Maximum Marks | Maximum Marks |
|---------|---|---------------|---------------|
| | | Theory | Practicals |
| BPH-6.1 | Pharmaceutics VIII (Dosage Form Design) | 100 | 100 |
| BPH-6.2 | Pharmacology III | 100 | 100 |
| BPH-6.3 | Pharmacognosy III | 100 | 100 |
| BPH-6.4 | Pharmaceutics IX (Forensic Pharmacy) | 100 | -- |
| | Total = | 400 | 300 |

Total marks in VI th Semester = 700

B. Pharm. VII th Semester

| S. No. | Name of the subject | Maximum Marks | Maximum Marks |
|---------|--|---------------|---------------|
| | | Theory | Practicals |
| BPH-7.1 | Pharmaceutics X (Pharmaceutical Technology) | 100 | 100 |
| BPH-7.2 | Pharmaceutical Chemistry VIII (Anal. Chem. II) | 100 | 100 |
| BPH-7.3 | Pharmacognosy IV | 100 | 100 |
| BPH-7.4 | Pharmacology IV (Pharmaceutical Biotechnology) | 100 | -- |
| | Total = | 400 | 300 |

Total marks in VII th Semester = 700

B. Pharm. VIII th Semester

| S. No. | Name of the subject | Maximum Marks | Maximum Marks |
|---------|--|---------------|---------------|
| | | Theory | Practicals |
| BPH-8.1 | Pharmaceutical Chemistry IX (Medicinal chemistry II) | 100 | 100 |
| BPH-8.2 | Pharmacology V | 100 | 100 |
| BPH-8.3 | Pharmaceutics XII (Biopharmaceutics) | 100 | 100 |
| BPH-8.4 | Pharmaceutics XIII (Pharmaceutical Packaging) | 100 | -- |
| | Total = | 400 | 300 |

| 7 | VII th Semester | 700 |
| 8 | VIII th Semester | 700 |
| Grand Total = | | 5700 |

B. PHARMACY IST SEMESTER

BPH-1.1 : PHARMACEUTICS I (Dispensing and Hospital Pharmacy)

THEORY: Lectures: 4 hrs./week.

UNIT-I

1. Definitions and General Dispensing Procedures.
2. Sources of information required for Pharmacists and History of Pharmacopoeias (I.P., B.P., and U.S.P.).
3. Sources of error and care required in dispensing prescriptions.
4. Pharmaceutical Latin-Latin terms used in prescriptions and their English equivalents.
5. Types of Dispensed products.
6. Containers, closures and labelling for dispensed products.
7. Colours, flavours, sweeteners and other additives used in prescriptions.

UNIT -II

8. Principles involved and procedures adopted in dispensing of typical preparations like mixtures, emulsion, creams, ointments, powders, pastes, jellies, suppositories, ophthalmics, pastilles, lozenges, pills, lotions, liniments, inhalations, paints, sprays etc.
9. Incompatibilities-physical and chemical, occurrence and methods adopted in corrections.

UNIT -III

10. Pharmaceutical Calculations- percentage solutions, enlarging and reducing recipes, calculation of doses, alligation, alcohol dilutions, proof spirit, isotonic solutions, milli-equivalents, displacement value etc.

UNIT -IV

11. Hospital and its organisation:
 - a) Pharmacy, organisation and personnel
 - b) Hospital formulary
 - c) Purchasing and inventory control
 - d) Drug distribution
 - e) Dispensing to inpatients
 - f) Dispensing to outpatients
 - g) Drug charges
 - h) Pre-packaging
 - i) Central sterile supply

- j) Drug information centre
- k) Maintenance of records
- l) Safe use of medicines

PRACTICALS: (6 hrs / week)

Number of practicals based on aforementioned theory portion but including dispensing of preparations like emulsions, suspensions, solutions, creams, ointments, inhalations, liniments, paints, syrups, mixtures, pastes etc.

B. PHARMACY IST SEMESTER

BPH-1.2: PHARMACEUTICAL CHEMISTRY I (Inorganic Chemistry)

THEORY: Lectures: 4 hrs./week.

Unit I

An outline of the methods of preparation, uses, sources of impurities, tests for purity and identity, including the limit test for iron, lead, heavy metals, chloride, sulphate and special tests if any, of the following classes of inorganic pharmaceuticals included in Indian Pharmacopoeia monograph details.

Acids and bases: Buffers, water.; Gastrointestinal agents: acidifying agents, antacids, protectives and adsorbents, cathartics.; Major extra and intra cellular electrolytes: physiological anions, electrolytes used for replacement therapy, acid base balance and combination therapy.

Unit II

Essential and trace elements: transition elements and their compounds of pharmaceutical importance: iron and haematinics, mineral supplements. Cationic and anionic compounds of inorganic drug useful for systemic effects. Topical agents: protectives, astringents and anti-infectives.

Unit III

Gases and vapours: oxygen, anesthetics and respiratory stimulants. Dental products: dentifrices, anti-caries agent. Complexing and chelating agents used in therapy. Miscellaneous agents: sclerosing agents, expectorants, emetics, poisons and antidotes, sedatives etc.

Unit IV

Pharmaceutical aids used in pharmaceutical industry: antioxidants, preservatives, filter aids, adsorbents, diluents, excipients, suspending agents, colorants etc. Inorganic radiopharmaceuticals: nuclear radiopharmaceuticals, reactions, nomenclature, methods of obtaining their standards and units of activity, measurement of activity, clinical applications and dosage, hazards and precautions.

PRACTICALS (6 hrs / week)

Practical based on aforementioned theory.

List of Books Recommended

Text Books

1. "Vogel's Textbook of Quantitative Inorganic Analysis", ELBS/ Longman, London.
2. J. H. Block, E. Roche, T. O. Soine and C. O. Wilson, "Inorganic Medicinal and Pharmaceutical Chemistry", Lea and Febiger, Philadelphia PA.

Reference Books

3. "Pharmacopoeia of India", Govt. of India, Ministry of Health
4. L. A. Doseher, "Modern Inorganic Pharmaceutical Chemistry".

B. PHARMACY IST SEMESTER

BPH-1.3: PHARMACOLOGY- I (Anatomy and Physiology)

THEORY: Lectures: 6 hrs./week.

Unit-I

1. **Introduction**
 - a. Scope of anatomy, physiology and basic terminology used in these subjects.
 - b. Introduction to human body & organization of human body.
 - c. Functional & structural characteristics of cell, cell components and their function.
 - d. Detailed structure of cell membrane & physiology of transport process.
 - e. Structural & functional characteristics of elementary tissues of human body: epithelial, connective, muscular and nervous tissue, and their sub-types.
 2. **Osseous system:** Structure, composition & functions of skeleton. Classification of joints, types of movements at joints, disorders of joints.
 3. **Skeletal muscles:** Their gross anatomy & physiology of muscle contraction, physiological properties of skeletal muscles and their disorders.
 4. **Haemopoetic system:** Composition & function of blood and its elements, their disorders, blood groups, and their significance, mechanism of coagulation, disorders of platelets and coagulation.
 5. **Lymph and lymphatic system:** Composition, formulation and circulation of lymph, disorders of lymph and lymphatic system, basic physiology and functions of spleen.
 6. **Respiratory system:** Anatomy of respiratory organs, functions of respiration mechanism and regulation of respiration, respiratory volumes and vital capacity.
- #### **Unit II**
7. **Cardiovascular system:** Basic anatomy of heart, physiology of heart, blood vessels and circulation. Basic understanding of cardiac cycle, heart sounds and electrocardiogram. Blood pressure and its regulation, Brief outline of cardiovascular disorders like hypertension, hypotension, arteriosclerosis, angina, myocardial infraction, congestive heart failure and cardiac arrhythmias.
 8. **Digestive system:** Gross anatomy of the gastrointestinal tract, function of its different parts including those of liver, pancreas and gallbladder, various

gastrointestinal secretions and their role in the absorption and digestion of food.

9. **Autonomic nervous system:** Physiology and functions of the autonomic nervous system. Mechanism of neurohumoral transmission in the autonomic nervous system.

10. **Central nervous system:** Functions of different parts of brain and spinal chord. Neurohumoral transmission in the central nervous system, reflex action, electroencephalogram, specialized functions of the brain, cranial nerves and their functions.

Unit III

11. **Endocrine system:** basic anatomy and physiology of pituitary, thyroid, parathyroid, adrenals, pancreas, testes and ovary, their hormones and functions.

12. **Urinary system:** various parts, structures and functions of the kidney and urinary tract. Physiology of the urine formation and acid base balance. Disease of urinary system.

13. **Reproductive system:** Male and female reproductive systems and their hormones, physiology of menstruation, coitus and fertilization. Sex differentiation, spermatogenesis and oogenesis. Pregnancy its maintenance and parturition.

14. **Sense organs:** Basic anatomy and physiology of the eye (vision), ear (hearing), taste buds, smell and skin (superficial receptors).

Unit IV

15. **Health Education:**

A. Classification of food requirements, balance diet, nutritional deficiency disorders, their treatment and prevention, specification of drinking water.

B. Demography and family planning: Demography cycle, family planning, and various contraceptive methods. Medical termination of pregnancy.

C. Brief out line of communicable diseases, their causative agents, modes of transmission and prevention (chicken pox, influenza, diphtheria, cough, tuberculosis, poliomyelitis, hepatitis, cholera, typhoid, food poisoning, helminthiasis, malaria, filariasis, rabies, trachoma, tetanus, leprosy, syphilis, gonorrhea and AIDS).

D. First aid: emergency treatment of shock, snakebites, burns, poisoning, fractures and resuscitation methods.

PRACTICALS (6 hrs / week)

1. Study of human skeleton.
2. Study of different systems with the help of charts and models.
3. Microscopic study of different tissues.
4. Estimation of hemoglobin in blood. Determination of bleeding time, clotting time, R.B. C. count, T. L. C., D. L. C., and E. S. R.
5. Recording of body temperature, pulse rate and blood pressure, basic understanding of electrocardiogram-PQRST waves and their significance.
6. Simple experiments involved in the analysis of normal and abnormal urine: collection of specimen, appearance, and determination of pH, sugar, proteins, urea and creatinine.
7. Physiological experiments on nerve-muscle preparations.
8. Determinations of vital capacity, experiments on spirometry.

7. B D Chaurasia, "Human Anatomy", CBS Publishers and Distributors, New Delhi.

B. PHARMACY IST SEMESTER

BPH-1.4: REMEDIAL BIOLOGY

THEORY: Lectures: 4 hrs./week.

Unit-I

1. Methods of classification of plants.
2. Plant cell: its structure and non-living inclusions, mitosis and meiosis, different types of plant tissues and their functions.

Unit-II

3. Morphology and histology of root, stem, bark, wood, leaf, flower, fruit and seed. Modification of root and stem.

Unit-III

4. General survey of animal kingdom, structure and life history of parasites as illustrated by amoeba, trypansomoma, plasmodium, taenia, ascaris.

Unit-IV

5. General structure and life history of insects like mosquito, houseflies and silkworm.

PRACTICALS: (4 hrs. / week)

1. Morphology of plant parts indicated in theory.
2. Care, use and type of microscope.
3. Gross identification of slides of structures and life cycle of lower plants/animals mentioned in theory.
4. Preparation, microscopic examination of stem, root and leaf of monocot and dicot leaf.
5. Structure of human parasite and insects mentioned in theory with the help of specimen.

List of Books Recommended

2. B. M. Johri, "*Reproductive Biology of Plants*", Narosa publishing House, Mumbai..
3. S. C. Rastogi, "*Concepts in Molecular Biology*", Willey eastern Ltd., Mumbai.
4. Claude a. villee, "*Introduction to Animal Biology*", W. D. Saunders co., Philadelphia.

B. PHARMACY IIND SEMESTER

BPH – 2.1: PHARMACEUTICS II (General Pharmacy)

THEORY: Lectures = 4 hrs / week

Unit-I

1. **Extraction:** Various methods of extraction of crude drugs namely percolation (various types including processes for concentrated preparations, constant hot percolation), maceration (various types including processes for organized and unorganized drugs, for concentrated preparations, double and triple maceration processes), Decoction. Formulation, preparation and uses of various Formulation, preparation and uses of pharmaceutical extracts

Unit-II

2. **Liquid Preparations:** Formulation, preparation and uses of various liquid products namely syrups, aromatic waters, spirits, solutions, mucilages, elixirs, glycerins, mouthwashes, gargles, nasal drops, ear drops.
3. **Semisolid dosage forms (ointments and suppositories):** ointment, ointment bases, and factors governing selection of ideal base, preparation of ointments. Suppositories-suppositories bases, selection of ideal base, preparation of suppositories

Unit-III

4. **Glandular Products:** Introduction, extraction methods and preparation of thyroid, liver, pancreas and pituitary gland.
5. **Surgical dressings:** like fibres, fabrics, bandages, surgical ligatures and sutures i.e. catgut and other absorbable and non-absorbable products. Quality control of surgical dressings

Unit-IV

6. **Immunology:** General introduction, infection, factors influencing infection, kinds of immunity, vaccines (i.e. Tetanus vaccine, Diphtheria vaccine, BCG vaccine, small pox vaccine), virus immunity, toxoids, toxins, diagnostic preparation, sera, antitoxins (i.e. Diphtheria antitoxins, Botulinium antitoxins), brief control of immunological products-identification tests, toxicity tests, sterility tests, potency tests and storage of immunological products.
7. **Blood and related products:** Whole human blood, concentrated human RBC, dried human plasma, dried human serum, human plasma protein fraction, human fibrinogen, human thrombin, plasma substitute, ideal plasma substitute properties, products i.e. PVP, Dextran, absorbable gelatin, sponge, oxidized cellulose, calcium gluconate.

PRACTICALS: (6 hrs / week)

Number of practicals based on aforementioned theory portion and including preparation of the following:

Peppermint water, cinnamon water, camphor water, chloroform water, concentrated peppermint water, concentrated cinnamon water, simple syrup, syrup of ginger, syrup of orange, syrup of tolu, compound syrup of ferrous sulphate, spirit of peppermint, spirit of chloroform, spirit of ether, strong solution of ammonium acetate, surgical solution of chlorinated soda, solution of cresol with soap, solution of ferric chloride, strong solution of iodine, solution of hydrogen peroxide, tannic acid glycerin, boric acid glycerin, mouth washes, nasal drops, ear drops, elixirs, mucilage of acacia, mucilage of tragacanth, tincture of orange, capsicum tincture, strong tincture of ginger, tincture of lemon, tincture of tolu, tincture of nuxvomica, liquid extract of liquorice, liquid extract of ipecacuanha, liquid extract of belladonna, liquid extract of senna, concentrated infusion of clove, concentrated infusion of quassia, concentrated infusion of senna, liver extract.

5. "*British Pharmacopoeia*", Her Majesty Stationary Office, University Press, Cambridge.
6. "*The United States Pharmacopoeia*", The United States Pharmacopoeial Convention, Mack Pub Co., Easton, PA.
7. "*British National Formulary*", Published Jointly by British Medical Association and Royal Pharmaceutical Society of Great Britain.

B. PHARMACY IIND SEMESTER

BPH – 2.2: PHARMACEUTICAL CHEMISTRY II (Organic Chemistry)

THEORY: Lectures: 5 Hrs/week

Unit I

Structure and Properties: Atomic structure; atomic orbitals, molecular orbital theory, wave equations, molecular orbital, bonding and anti-bonding orbitals, electronic configuration of some molecules, covalent bonds, hybrid orbitals, intermolecular forces, bond dissociation energy, polarity of bonds, polarity of molecules, structural and physical properties, intermolecular forces, acids and bases, isomerism.

Unit II

Stereochemistry: introduction, optical activity, stereoisomerism, specifications of configuration, reactions involving stereoisomers. Stereoselective and Stereospecific reactions.

Unit III

Structure, Nomenclature, preparation and reactions of alkanes, alkenes, alkynes, cycloalkanes, dienes, benzene, polynuclear aromatic compounds, arenes, alkyl halides, alcohols, ether epoxides, amines, phenols, aldehydes and ketones, carboxylic acids, functional derivatives of carboxylic acid, carbanions, aldol condensation, claisen condensation, malonic esters and acetoacetic ester synthesis.

Unit IV

Nucleophilic aromatic substitutions: α,β -unsaturated carbonyl compounds. Electrocyclic reactions, sigmatropic reactions, neighbouring group effects. Catalysis by transition metal complexes.

PRACTICALS: (6 hrs / week)

1. Synthesis of selected organic compounds.
2. Introduction to the use of stereomodels.
3. Identification of organic compounds and their derivatisations.

B. PHARMACY IIND SEMESTER

BPH – 2.3: PHARMACOGNOSY I

THEORY: Lectures: 4 Hrs/week

Unit-I

1. Definition, history, development and scope of Pharmacognosy.
2. Sources of drugs: biological, marine, geographical and plant tissue cultures as sources of drugs.
3. Classification of drugs alphabetical, morphological, taxonomical, pharmacological, chemical and chemotaxonomical with their merits and demerits.
4. Quality control of crude drugs: Adulteration of crude drugs and their detection by organoleptic, microscopic, physical, chemical, and biological methods of evaluations.

Unit-II

5. Plant taxonomy: study of the following families with special reference to medicinally important plants- Apocynaceae, Solanaceae, Rutaceae, Umbelliferae, Leguminosae, Rubiaceae, Liliaceae, Labiate, Cruciferae.
6. Cultivation, collection, processing and storage of crude drugs: factors influencing cultivation of medicinal plants, fertilizers of common use, pest management and natural pest control agents. Plant hormones and their applications, polyploidy, mutation and hybridization with reference to medicinal plants.
7. Study of pharmaceutical aids like talc, diatomite, kaolin, bentonite, gelatin, and natural colorants.

Unit-III

- An introduction to active constituents of drugs: their isolation, classification and properties.
- Systematic Pharmacognostical study of the following: (A.) Carbohydrates and derived products: Agar, Guar gum, Gum acacia, Honey, Isabgol, Pectin, Starch and Tragacanth. (B.) Lipids: Bees wax, Castor oil, Cod liver oil, Linseed oil, Shark liver oil and Wool fat.

Unit-IV

- Study of drugs containing resins and resin combinations: Colophony, Podophyllum, Jalap, Cannabis, Capsicum, Myrrh, Asafoetida, Balsam of tolu, Balsam of peru, Benzoin, Turmeric, Ginger.
- Volatile oil: General methods of obtaining volatile oils from plants, study of volatile oils of Mentha, Coriander, Cinnamon, Lemon peel, Orange peel, Lemon grass, Caraway, Cumin, Dill, Spearmint, Clove, Fennel, Nutmeg, Eucalyptus, Cardamom, Valerian, Palmarosa, Gaultheria, Sandal wood.

PRACTICALS: (6 hrs / week)

Practical exercises based on aforementioned theory including the following:

- Morphological characteristics of plant families mentioned in theory.
- Microscopic measurements of cells and cell contents and determination of leaf constants.
- Morphological and microscopical study of crude drugs mentioned in theory.
- Chemical examination for the identification of crude drugs mentioned in theory.

- Jean Brunton, "Text Book of Pharmacognosy, Phytochemistry and Medicinal Plants", Intercept Limited, Andover, England, U.K.

B. PHARMACY IIND SEMESTER

BPH – 2.4:PHARMACEUTICAL CHEMISTRY III (Physical Chemistry)

THEORY Lectures: 3 Hrs/week

Unit I

Behaviour of gases: kinetic theory of gases, deviation from ideal behaviours and explanation. The liquid state: Physical properties (Parachor, refractive index, optical rotation, dipole moments and chemical constituents). Solutions: Ideal and real solutions, solutions of gases in liquids, colligative properties, partitions coefficient, conductance and its measurement, Debye huckel theory. Thermodynamics; first, second and third laws, zero law, absolute temperature scale, thermochemical equations, phase equilibrium and phase rule.

Unit II

Adsorption: Frudlich and Gibbs adsorption isotherms, Langmuir theory of adsorption. Photochemistry: Consequences of light absorption, Jablenski diagram, Lambert-Beer law, Quantum efficiency. Chemical Kinetics: Zero, first and second order reactions, complex reaction, theories of chemical kinetics, characteristics of homogeneous and heterogeneous catalysis, acid base and enzyme catalysis. Quantum mechanics: Postulates of quantum mechanics, operators in quantum mechanics, and the Schordinger wave equation.

Unit III

Solution of electrolytes: Arrhenius theory of electrolytic dissociation, modern theory of strong electrolytes, and other coefficients for expressing colligative properties. Ionic equilibria; Ostwalds dilution law, Lawry Bronsted and Lewis theory of acids and bases, ionization constants of weak acids and bases, ionic product of water.

Unit IV

Electrochemistry: The electric cell, electrode potential, half cells, types of half cells, sign convention, Nernst equation, the salt bridge, activity series, standard potential, standard hydrogen electrode, measuring the relative voltage of half cells, calculations of standard potential, reference electrodes, indicator electrodes.

- A. Potentiometry: theoretical considerations, ion-selective electrodes, measurement of potential, location of end point equipment, analytical application, direct measurement of a metal concentration, differential curve, determination of K_{sp} , pH measurement dead-stop titrations; pH meter, pH definition, relation to pH to potential, equipment and applications.
- B. Conductance and high frequency titrations and their applications.
- C. Coulometric titrations, its principles and applications, controlled potential coulometry, cell design, instrumentation, advantages and limitations, and electrode selection.
- D. Polarography and its applications: theory of mass transport processes, current processes, current potential relationship, polarization, choice of electrodes, effect of oxygen, instrumentation, calculation of concentration, laboratory design and safety.
- E. Amperometric titrations and its applications.

PRACTICALS (6 hrs / week)

Number of experiments based on aforementioned theory

List of Books Recommended

Text Books.

1. Bahl and Tuli, "*Physical Chemistry*", S. Chand & Co., New Delhi.

Reference Books

2. W. S. Brey, "*Physical Chemistry and its Biological Applications*", Academic Press.
3. K. J. Laidler, "*Physical Chemistry with Biological Applications*", Benzman.
4. V. R. Williams and H. S. Williams, "*Basic Physical Chemistry for Life Sciences*", W. H. Freeman.
5. S. R. Pali and S. K.D.E. Prabartak, "*Practical Physical Chemistry*", Haltone Ltd. Calcutta.
6. J. A. Kitckener, "*Findly's Physical Chemistry*", (Ed.), Green and Company, London.
7. Jenkin's "*Quantitative Pharmaceutical Chemistry*", Mcgraw Hill Book Company, New York

B. PHARMACY IIIRD SEMESTER

BPH – 3.1: PHARMACEUTICS III (Pharmaceutical Engineering I)

THEORY Lectures: 6hrs/week

UNIT – I

1. **Flow of fluids:** Introduction, mechanism of fluid flow, Reynolds number and its significance, Bernoulli's theorem, manometers and friction losses in pipes, measurement of flow rate using direct weighing or measuring, hydrodynamic methods, displacement meters and dilution methods. Regulation of flow using plug cocks, globe valves, gate valves, unidirectional valves, automatic regulating valve, butterfly valve and diaphragm valve, and water hammer.
2. **Refrigeration:** Principle and equipment employed for vapor compression refrigeration, lithium bromide absorption refrigeration and steam jet refrigeration..Applications of refrigeration in Pharmacy

UNIT – II

3. **Heat Transfer:** Modes of heat transfer, Fourier's law, overall heat transfer coefficient, Stefan-Boltzman's law, single pass heater, multipass heater, liquid-liquid heat interchanger and finned tubes.
4. **Drying:** Theory, behaviour of solids during drying, static bed dryers, moving bed dryers, fluidised bed dryer and pneumatic bed dryers.

UNIT – III

5. **Size reduction:** Mechanism, factors influencing, energy requirements, applications in pharmacy, grinders i.e. fluid energy mill, hammer mill, ball mill and its variants, centrifugal mill, attrition mill, edge runner mill, colloid mill, squirrel cage disintegrator, Buhrstone mill.
6. **Centrifugation:** theory, industrial centrifugal filters and industrial centrifugal sedimenters
7. **Filtration:** Theory, filter aids, filter media, industrial filters i.e. sand filter, washing and non-washing type filter presses, rotary drum filter, leaf filters, edge filter.

UNIT – IV

8. **Evaporation:** Factors affecting evaporation, natural circulation evaporators e.g. evaporating pan, evaporating still, horizontal and vertical tube evaporators, forced circulation evaporators, film evaporators, multiple effect evaporation, material and energy balance of evaporators.
9. **Humidification, dehumidification and air conditioning:** Principles of Humidification, dehumidification and air conditioning, psychrometry, humidity measurement, large-scale equipment for humidification and dehumidification, cooling towers.

List of Books Recommended Text Book

1. Cooper and Gunns' "*Tutorial Pharmacy*", CBS Publishers, Delhi
2. "*Bentley's Textbook of Pharmaceutics*", ELBS Bacilliere Tindall.
3. W L Badger and J T Banchemo, "*Introduction to Chemical Engineering*", McGraw Hill International Book Co., London

Reference Books

4. "*Remington' Pharmaceutical Sciences*", Mack Publishing Co., P.A.
5. Leon Lachman, H A Liberman and J L Kanig, "*The Theory and Practice of Industrial Pharmacy*", Lea & Febiger, Philadelphia
6. W L McCabe and J C Smith, "*Unit operations of Chemical Engineering*", McGraw Hill International Book Co., London
7. R H Perry and C H Chilton, "*Chemical Engineers Handbook*", McGraw Hill and Co.

PRACTICALS: (6 hrs / week)

(Pharmaceutical Engineering Drawing)

1. Introduction: Significance of Engineering Drawing in Pharmaceutical Industry, drawing instruments and their uses, lines, lettering and dimensioning.
2. Scales: Construction of plain scales, vernier scale, diagonal scale, comparative scale and isometric scale
3. Isometric projections: Theory, isometric views and projections, construction of isometric projections/views of two-dimensional and three-dimensional objects.
4. Orthographic projections: Theory, types, and construction of drawing in both first angle and third angle. Various methods of sectioning i.e. full section, half section, removed section, partial section, and offset section.
5. Conversion of orthographic projections into isometric projections/views

- Drawing of machine parts and simple pharmaceutical equipment
- Methods of depicting layouts of various sections of a pharmaceutical unit.

List of Books Recommended

Text Books

- N. D. Bhatt, "Machine Drawing"
- N. D. Bhatt, "Engineering Drawing"

Reference Books

- French and Vierck, "A Manual of Engineering Drawing for Students and Draftsman"
- Giesecke, Mitchell and Spencer, "Technical Drawing"

B. PHARMACY IIIRD SEMESTER

BPH – 3.2: PHARMACEUTICAL CHEMISTRY IV (Pharmaceutical Biochemistry)

THEORY: Lectures: 4 Hrs/week

Unit I

Energy, rich compounds, production of ATP, and its biological significance. Electron transport and biological oxidation.

Metabolism of lipids: Oxidation of fatty acids oxidation of unsaturated fatty acids, biosynthesis of fatty acids. Synthesis and degradation of triglycerides, hormonal influence of the mobilization of fat in adipose tissue, ketosis phospholipids, sphingolipids.

Unit II

Enzymes: classification of enzymes, general mechanism of enzyme function, factors affecting the velocity of enzyme catalysed reaction, activators and inactivators of enzymatic reaction. Clinical application of enzyme estimation. Isoenzyme, immobilization of enzymes.

Unit III

Metabolism of carbohydrates: an aerobic metabolism of glucose, aerobic metabolism of glucose (Kreb's cycle) pentose phosphate pathway, metabolism of galactos, glycogenesis, glycogenolysis, gluconeogenesis, regulation of blood glucose concentration.

Metabolism of proteins; nitrogen fixation, nitrogen balance, ammonia assimilation, nitrification and nitrate assimilation, amino acid degradation and urea cycle. Metabolism of phenyl-alanine and tryptophan.

Unit IV

Metabolism of purines and pyrimidines: biosynthesis of RNA and DNA. Role of cyclic nucleotide in enzyme activation. Gene protein relationship, control of protein synthesis. Mutation, physical and chemical mutagenesis repair mechanism, recombinant DNA technology, genetic code inborn error of metabolism.

PRACTICALS: (6 hrs / week)

Number of experiments based on aforementioned theory portion.

List of Books Recommended

Text Books

- D. T. Plumer, "An Introduction to Practical Biochemistry", Tata McGraw Hill, New Delhi.
- J. Jayaraman, "Laboratory Manual in Biochemistry", Wiley Eastern Ltd., Delhi.
- E. E. Conn and P. K. Stumpf, "Outlines of Biochemistry", John Wiley and Sons, New York.

Reference Books

- "Harper's Review of Biochemistry", Lange Medical Publications
- A. L. Lehninger, "Principles of Biochemistry", CBS Publishers.

- B. Harrow and A. Mazur, "Textbook of Biochemistry", W. B. Saunders Company, Philadelphia

B. PHARMACY IIIRD SEMESTER

BPH – 3.3: PHARMACOGNOSY II

THEORY: Lectures: 4 Hrs/week

Unit I

1. Phytochemical screening : (a) Preparation of extracts. (b) Screening tests for alkaloids, glycosides, resins, tannins, saponins and flavonoids in plant extracts.
2. Study of the biological sources, cultivation, collection, commercial verities, chemical constituents, substituents, adulterants, diagnostic microscopic and macroscopic features and specific chemical tests of following group of Glycosides containing drugs:
 - a. Saponins: liquorice, ginseng, dioscorea and senega.
 - b. Cardio-active sterols: digitalis, squill, strophanthus and thevetia.
 - c. Anthraquinones : aloe, senna, rhubarb and cascara.

Unit II

3. Study of Tannins and tannin containing drugs like gambir, black catechu, gall and myrobalan.
4. Studies of traditional drugs, common vernacular names, botanical sources, morphology, chemical nature of chief constituents, pharmacology, categories and common uses and marketed formulations of following indigenous drugs:

Amla, Shatavari, Aamarg, Gokhru, Shankhpushpi, Gaduchi, Brahmi, Arjuna, Methi, Lehsun, Guggal, Gymnema and Neem.
5. Holistic concepts of Drugs administration in traditional systems of medicine:

Introduction to ayurvedic preparations like arishtas, asavas, gutikas, tailas, churnas, lehas and bhasmas.

Unit III

6. Systematic study of source, cultivation, collection, processing, commercial verities, chemical constituents, substitutes, adulterants, uses, diagnostic macroscopic and microscopic features and specific chemical tests of following alkaloid containing drugs:
 - (a) Pyridine-piperidine: tobacco, areca and lobelia.
 - (b) Tropane: belladonna, hyoscyamus, datura and withania.
 - (c) Quinoline and isoquinoline : Cinchona, ipecac, opium.
 - (d) Indole: ergot, rauwolfia, catharanthus and physostigma.

- (e) Imidazoles: pilocarpus.
- (f) Steroidal: vertrum, kurchi.
- (g) Alkaloidal amines: ephedra and colchicum.
- (h) Glycoalkaloids: solanum.
- (i) Purines: Coffee, tea and cola.

Unit IV

7. Biological sources, preparation, identification test and uses of the following enzymes: Diastase, papain, pepsin, trypsin and pancreatin.
8. Introduction, classification and study of different chromatographic methods and their applications in evaluation of herbal drugs.
9. Introduction and study of plant bitters and sweeteners.
10. Plant based pesticides and insecticides.

PRACTICALS (6 hrs / week)

1. Phytochemical screening of secondary plant metabolites listed as above in theory portion.
2. Morphological, microscopical and chemical evaluation of crude drugs as mentioned
3. above.
4. Standardisation/study of some traditional drug formulations/ayurvedic marketed preparations.

List of Books Recommended

Text Books

8. Jean Brunton, "Text Book of Pharmacognosy", Phytochemistry and Medicinal Plants, Intercept Limited, Andover, England, U.K

B. PHARMACY IIIRD SEMESTER

BPH – 3.4: PHARMACEUTICAL CHEMISTRY V (Chemistry of Natural Products)

THEORY: Lectures: 4 Hrs/week

Unit I

Heterocyclic compounds: Study of fundamentals of heterocyclic compounds, nomenclature, method of synthesis and important chemical reactions of the following: Five membered Heterocycles: Furan, Thiophene, Pyrrole, Thiazole, oxazole, imidazole, Pyrazole. Six membered Heterocycles: Pyridine, pyridazine, Pyrimidine, Pyrazine, Pyrones. Benz-fused Heterocycles: Quinoline, Isoquinoline, Indole.

Unit II

Carbohydrates: An account of the chemistry of Arabonose, Ribose, mannose, Glucose, fructose, Sucrose, Lactose, Cellulose, starch, Glycogen and dextrans, Structure elucidation of glucose, sucrose, starch. Study of chemistry of fixed oils, fats and waxes.

Unit III

Proteins and Amino Acids: Isolation and general methods of synthesis of amino acids and physico-chemical properties. General classification of proteins and end group analysis. Structural features of DNA and RNA.

Unit IV

Terpenes: Classification, Isoprene rule, Chemistry of various constituents of volatile oils: Limonene, Pinene, Cineole, Camphor, Menthol, Menthone, Thymol, Citral and Eugenol. Structure elucidation of Pinene, Limonene, Camphor, Citral. Glycosides: Classification and method of isolation of α and β -d-methyl glucoside. Chemistry of salicin, cardiac glycosides, anthraquinone glycosides, saponins. Structure elucidation of cardiac glycosides.

List of Books Recommended

Text Books

6. F. C. Mann, and B. C. Saunders, "Practical organic Chemistry", The English Language Book Society and Longman group Ltd., London

B. PHARMACY IIIRD SEMESTER

BPH – 3.5: ENVIORNMENTAL STUDIES

THEORY: Lectures: 4 Hrs/week

Unit-I

1. The Multidisciplinary Nature of Environmental Studies
Definition, scope and importance
Need for public awareness
2. Natural Resources
Renewable and non- renewable resources:
Natural resources and associated problems
 - (a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.
 - (b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams benefits and problems.
 - (c) Mineral resources: Use and over-exploitation, environmental effects of extracting and using mineral resources, case studies.
 - (d) Food resources: World food problems, changes caused by agriculture and over-grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.
 - (e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.
 - (f) Land resources: Land as a resource, land degradation man induced land slides, soil erosion and desertification.
 - Role of an individual in conservation of natural resources.
 - Equitable use of resources foe sustainable life styles.

Unit-II

3. Ecosystems
 - Concept of an ecosystem.
 - Structure and function of an ecosystem.
 - Producers, consumers and decomposers.
 - Energy flow in the ecosystem
 - Ecological succession
 - Food chains, food webs and ecological pyramids.

- Introduction, types, characteristic features, structure and function of the following ecosystem:
 - (a) Forest ecosystem
 - (b) Grassland ecosystem
 - (c) Desert ecosystem
 - (d) Aquatic ecosystem (ponds, streams, lakes, rivers, oceans, estuaries)

4. Biodiversity and its Conservation

- Introduction-Definition: genetic, species and ecosystem diversity.
- Biogeographical classification of India.
- Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values.
- Biodiversity at global, national and local levels.
- India as a mega-diversity nation.
- Hot-spots of biodiversity.
- Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.
- Endangered and endemic species of India
- Conservation of biodiversity: *In-situ* and *Ex-situ* conservation of biodiversity.

Unit-III

5. Environmental Pollution

Definition

- Causes, effects and measures of
 - (a) Air pollution
 - (b) Water pollution
 - (c) Soil pollution
 - (d) Marine pollution
 - (e) Noise pollution
 - (f) Thermal pollution
 - (g) Nuclear hazards
- Solid waste management: Causes, effects and control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution
- Pollution case studies
- Disaster management: floods, earthquakes, cyclone and landslides.

6. Human Population and Environment

- Population growth, variation among nations.
- Population explosion-Family Welfare Programme.
- Environment and human health.
- Human rights.
- Value education.
- HIV/AIDS.
- Women and Child Welfare.
- Pole of Information Technology in Environment and human health.
- Case studies.

Unit-IV

7. Social Issues and the Environment

- From Unsustainable to Sustainable development.
- Urban problems related to energy.
- Water conservation, rain water harvesting, water shed management.
- Resettlement and rehabilitation of people: its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions.
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Wasteland reclamation.
- Consumerism and waste products.
- Environment Protection Act.
- Air (Prevention and Control of Pollution) Act.
- Water (Prevention and Control of Pollution) Act.
- Wildlife Protection Act.
- Forest Conservation Act.
- Issues involved in enforcement of environmental legislation.
- Public awareness.

Field Work

- Visit to a local area to document environmental assets-river, forest grassland/hill/mountain.
- Visit to a local polluted site-Urban/ Rural/ Industrial/ Agricultural.
- Study of common plants, insects and birds.
- Study of simple ecosystems-pond, river, hill slopes etc.

B. PHARMACY IVTH SEMESTER

BPH-4.1: PHARMACEUTICAL CHEMISTRY VI (Analytical Chemistry I)

THEORY: Lectures: 6 hrs / week

Unit I

Introduction: Significance of quantitative analysis in quality control, different techniques of analysis, preliminaries and definitions, significant figures, rules for retaining significant digits, types of errors, mean deviation and standard deviation, statistical treatment of small data sheets, selection of sample, precision and accuracy, fundamentals of volumetric analysis, method of expressing concentration, primary and secondary standards. Acid Base Titrations: acid base concepts, role of solvent, relative strength of acids and bases, ionisation law, law of mass action, common ion effect, ionic product of water, neutralization curves, acid-base indicators, theory of indicators, choice of indicators, mixed indicators, application in assay of H_3PO_4 , NaOH, $CaCO_3$ etc.

Unit II

Oxidation Reduction Titrations: concepts of oxidation and reduction, redox reactions, strength and equivalent weights of oxidising and reducing agents. Theory of redox titrations, cell representations, measurement of electrode potential. Oxidation-reductions, potassium iodate titrations, potassium bromate titrations, titanous chloride titrations, iodophenol titration, pharmaceutical applications. Precipitation Titrations: precipitation reactions, solubility products, effects of acids, temperature and solvent upon the solubility of a precipitate. Argentometric titrations, ammonium potassium thiocyanate titrations, mercuric nitrate titrations, methods: Mohr's method, Volhards method, Fajans method and pharmaceutical applications.

Unit III

Gravimetric Analysis: preparation of Gooch crucible for filtration and use of sintered glass crucible, determination of water of hydration. Non-aqueous Titrations; theoretical titrations, scope and limitations, acid base equilibria in non-aqueous media, titrations of weak bases, titrations of weak acids, indicators, pharmaceutical products, should be selected for illustration. Complexometric Titrations: concept of complexation and chelation, Warner's co-ordination number and electronic structure of complex ions, stability constants, titration curves, masking and demasking agents, types of complexometric titrations, metal ion indicators, factors influencing the stability of complexes, applications.

Unit IV

Miscellaneous method of analysis; Diazotisation titration, Kjeldahl nitrogen determination, Karl fishcher titration, determination of alcohol in liquid galenicals, oxygen flask combustion, gasometry. Extraction procedure, separation of drug from excipients, liquid-liquid extraction, separation of mixtures by extraction, distribution law, successive extraction, the Craige method of multiple extraction, continuous counter-current extraction, effect of temperature.

PRACTICALS: (6 hrs / week)

Number of experiments based on aforementioned theory.

List of Books Recommended

Text Books

1. "Vogel's Textbook of Quantitative Inorganic Analysis", ELBS/ Longman, London.
2. A. H. Beckett and J. B. Stenlake, "Practical Pharmaceutical Chemistry, Vol. I and II", The Athlon Press of the University of London.

Reference Books

3. I. M. Kolthoff and V. A. Stenger, "Volumetric Analysis, Vol. II Titration Methods", Interscience Publishers, Inc., New York.
4. K. A. Connors, "A Textbook of Pharmaceutical Analysis", Wiley Interscience, New York.
5. "Jenkin's Quantitative Pharmaceutical Chemistry", Mcgraw Hill Book Company, New York.
6. Lunn G., "HPLC- Method for Pharmaceutical Analysis"
7. Lunn G. "Handbook of Derivatisation Reaction for HPLC"

B. PHARMACY IVTH SEMESTER

BPH-4.2: PHARMACEUTICS- IV (Pharmaceutical Microbiology)

THEORY: Lectures: 6 hrs / week

Unit I

1. Introduction to the science of microbiology-ancient theories concerning the origin of life, contribution of great scientists to this science, with particular reference to the contributions of the following scientists: A.V. Leeuwenhoek, Louis Pasteur, Edward Jenner, Robert Koch, Alexander Fleming, Joseph Lister.
2. Microscopy: Microscopes, their magnification, resolution, illumination and filters, working of different types of microscopes, micrometry.

Unit II

3. Classification of microbes and their taxonomy.
4. Nutrition, cultivation isolation and identification of bacteria, fungi and viruses.
5. Bacterial enzymes – classification, nomenclature, production by fermentation, extraction methods, immobilization techniques and applications of bacterial enzymes in general and detailed account of following bacterial enzymes: alpha amylase (diastase) and proteases.

Unit III

6. Disinfection, factors affecting disinfection, dynamics of disinfection, disinfectants and antiseptics and their evaluation.
7. Sterilization, different methods, applications and evaluation of sterilization methods.
8. Aseptic technique.

Unit IV

9. Microbial standardisation of antibiotics (ampicillin, streptomycin), Vitamins (Vitamin B-12, Niacin) and calcium pantothenate.
10. Fermentation: Types of media used; factors affecting, control of various parameters during fermentation. A detailed account of the industrial fermentation process for manufacture of penicillin, streptomycin, glutamic acid; Lysine, citric acid, Vit.B₁₂. [6]

PRACTICALS: (6 hrs / week)

Number of experiments based upon afore mentioned theory and including Experiments devised to prepare various types of culture media, subculturing of common aerobic and anaerobic bacteria, fungus and yeast, various staining methods, various methods of isolation and identification of microbes, sterilizing techniques and evaluation of sterilizing techniques, evaluation of aseptics and disinfectants, testing and sterility of pharmaceutical products as per I.P. requirements, evaluation of potency of antibiotics and vitamins etc.

List of Books Recommended

Text Books

2. Pelczar, Chan and Krieg, “*Microbiology*”.

Reference Books

3. R Y Stanier, Ingrham, “*General Microbiology*”, Wheelis and Painter.
4. Hugo and Russel, “*Pharmaceutical Microbiology*”, Blackwell Scientific Publications, Oxford.
5. G Sykes, “*Disinfection and Sterilization*”.
6. Davis, Dulbetco, Eisen “*Microbiology*”.
7. Benzamin Lewin, Gene V, “*Microbiology*”.
8. Prescott and Dunn, “*Industrial Microbiology*”, Mcgraw Hill Book Company Inc.
9. Peppler, “*Microbiology Technology*”, Vol.I & II.

B. PHARMACY IVTH SEMESTER

BPH-4.3: COMPUTER SCIENCES

THEORY: Lectures: 4 hrs / week

Unit I

1. Introduction: Importance of computers, history of computers (generations), types of computers, classification of computers, components of a computer, applications of computers including Pharmaceutical applications, hardware description, Languages like assembly, machine, and common high-level languages, computer viruses.
2. Introduction to Internet: Concepts of Internet, WWW, Gopher, e-mail and applications of Internet. [5]

Unit-2

1. Programming in BASIC: Introduction to BASIC, flowcharting, BASIC statements, constants and variables, expressions in BASIC, print control, jumping and looping, subscripted variables, functioning and subroutines, histogram and graphs, programme design, file management in BASIC and computer graphics.

Unit -3

1. Introduction to operating system with a special emphasis on Windows.
2. MS-Word- Introduction to Word processing, Introduction to MS word, Editing, formatting,, previewing and printing a document, advanced features of MS word (Find and replace, grammar and spelling, auto correct, word count, mail merge, table and charts.

Unit-4

1. MS- excel- Worksheet basics, creating, formatting, previewing and printing a worksheet, graphs and charts, working with formulas and cell referencing, database creation, sorting, database functions (Mathematical and trigonometrical, statistical and logical functions).
2. MS-PowerPoint- Features and various versions, creating presentations, working with different views and menus of PowerPoint, editing and formatting a text, working with slides, printing a presentation, inserting objects, slide sorter and animation effects.

PRACTICALS: (6 hrs / week)

Number of experiments based on aforementioned theory.

B. PHARMACY IVTH SEMESTER

BPH-4.4: PHARMACEUTICAL MATHEMATICS AND STATISTICS

THEORY: Lectures: 6 hrs / week

Unit-I

Matrices and Determinants: definition of matrix, types of matrices, arithmetic operations on matrices, determinants and its expansion, important properties of determinants, solutions of simultaneous equations by Cramer's rule.

Differentiation: Concepts of functions, limits and differentiation; differentiation of standard functions (without using first principle), including function of a function (chain rule), differentiation of implicit functions, logarithmic differentiation, parametric differentiation, elements of successive differentiation.

Unit-II

Integration: integration as inverse of differentiation, indefinite integrals of standard functions, integration- by parts and substitution methods, formal evaluation of definite integrals.

Differential equations: definition, formation and solution of ordinary differential equations of first order and first degree (variable separable technique only).

Laplace transforms: definition, properties of linearity and shifting, transforms of elementary function (without proof) and inverse Laplace transforms not involving Euler's theorem.

Unit-III

Measures of central tendency and dispersion: requisites of an ideal measure, arithmetic mean, median, mode, range, mean deviation, standard deviation, coefficients of variation.

Linear correlation: bi-variate data, scatter diagrams, correlation, types of correlation, Karl Pearson's and Spearman's methods, coefficients of correlation and its important properties (without proof).

Linear regression: regression, method of least squares, lines of regression, regression coefficients and their important properties (without proof).

Unit-IV

Probability: events, classical and statistical definitions of probabilities, addition and multiplication laws of probability, conditional probability, Baye's theorem (statement only) and its applications.

Standard probability distribution: definitions, important properties (without proof) and applications of binomial, Poisson and normal distribution/ normal curves. Central limit theorem (statement only).

Statistical inference: concepts of parameter, statistic, sampling distribution, standard error, hypothesis, type-I and type-II errors; testing of hypothesis, t-test (paired and unpaired), Z-test (for means only).

Note:- Emphasis on Pharmaceutical applications, wherever possible, of the above-mentioned concepts and results (without proof).

Recommended Text Books:

1. Goon, A.M, Gupta, M.K and Dasgupta, B, Basic Statistics, World Press.
2. Gupta, S.P, Statistical Methods, Sultan Chand & Sons, New Delhi.
3. Dinodoia, J and Chugh, K, Elements of Pharmaceutical Mathematics (Vol.I and Vol.II), Jeevonsons Publications, New Delhi.
4. Dhall, G.D, Chhibbar, S.N, Trivedi, H.O, and Chandra, S, Frank Mathematics for B.Pharma, Frank Bros. & Co. Ltd., New Delhi.

Recommended Reference Books:

1. *Bradley and Smith, Calculus, Prentice Hall*
2. *Hungerford, T.W, Algebra.*
3. *Mood, A.M, Graybill, F.A, and Boes, D.C, Introduction of the Theory of Statistics, Tata Mcgraw Hill*
4. Meyer, P.L, Introductory Probability and Statistical Applications, Oxford & IBH Publishing Co. Ltd.
5. Piskunov, N., Differential and Integral Calculus, Vol-II.
6. Rizvi, S.T, Algebra and its Applications.

B. PHARMACY VTH SEMESTER

BPH – 5.1: PHARMACEUTICS V (Physical Pharmacy)

THEORY Lectures: 4 hrs / week

UNIT-I

1. Matter- State and selected properties: State of matter, change in the state of matter, latent heats and vapour pressure, sublimation-critical point, eutectic mixtures, relative humidity, liquid complexes, liquid crystals, glassy state, solid-crystalline and amorphous polymorphism.
2. Micromeretic and Powder Rheology: Particle size and distribution, average particle size, number and weight distribution, particle number, method of determining particle volume, optical microscopy, sieving, sedimentation, measurement, particle shape, specific surface, methods of determining surface area, permeability, adsorption, derived properties of powders, porosity, packing arrangement, densities, bulkiness and flow properties.

UNIT- II

1. Surface and Interfacial Phenomenon: Liquid interface, surface and interfacial tensions, surface free energy measurement of surface and interfacial tensions, spreading coefficient, adsorption at liquid interfaces, surface active agents, HLB classification, solubilization, detergency, adsorption at solid interfaces, solid gas and solid-liquid interfaces, complex films, electric properties of interface.
2. Viscosity and Rheology: Newtonian systems, laws of flow, kinematic viscosity, effect of temperature, non Newtonian systems, pseudoplastic, dilatant, plastic, thixotropy, thixotropy in formulation, determination of viscosity, capillary, falling ball, rotational viscometers.

UNIT- III

1. Dispersion system
Colloidal dispersions: Definition, types, properties of colloids, protective colloids, applications of colloid in pharmacy. Suspensions and Emulsions: Interfacial properties of suspended particles, settling in suspensions, theory of sedimentation, effect of Brownian movement, sedimentation of flocculated particles, sedimentation parameters, wetting of particles, controlled flocculation, flocculation in structured vehicles, rheological considerations, emulsions; types, theories and physical stability.
2. Complexation: Classification of complexes, method of preparation and analysis, application.

UNIT- IV

1. Kinetics and drug stability: general considerations & concepts, half life determination, influence of temperature, light, solvent, catalytic species and other factors, accelerated stability study, expiration dating.
2. Buffers: Buffer equation and buffer capacity in general, buffer in pharmaceutical systems- preparation-stability, buffered isotonic solutions, measurement of tonicity calculations, methods of adjusting isotonicity.

PRACTICALS:

Number of experiments based upon aforementioned theory and including the following:

1. Determination of latent heat, vapour pressure and critical point.
2. Studies on polymorphs, their identification and properties.
3. Determination of particle size, particle size distribution and surface areas using various methods of particle size analysis.
4. Determination of derived properties of powders like density, porosity, compressibility, angle of repose etc.
5. Determination of surface/interfacial tension, HLB values and critical micellar concentration of surfactants.
6. Study of rheological properties of various types of systems using different viscometers.
7. Studies of different types of colloid and their properties.
8. Preparation of various types of suspensions and determination of their sedimentation parameters.
9. Preparation and stability studies of emulsions.
10. Studies on different types of complexes and determination of their stability constants.
11. Determinations of half-life rate constant and order of reaction.
12. To study the influence of various factors on the rate of reaction.
13. Accelerated stability testing, shelf life determination and expiration dating of pharmaceuticals.
14. Preparation of pharmaceutical buffers and determination of buffer capacity.

List of Books Recommended

Text Books

1. Cooper and Gunns' "*Tutorial Pharmacy*", CBS Publishers, Delhi
2. A N Martin, "*Physical Pharmacy*", K M Varghese & Co., Mumbai
3. "*Remington' Pharmaceutical Sciences*", Mack Publishing Co., P.A.

REFERENCE BOOKS

4. E Shotton and K Ridgway, "*Physical Pharmaceutics*" Oxford University Press, London
5. Leon Lachman, H A Liberman and J L Kanig, "*The Theory and Practice of Industrial Pharmacy*", Lea & Febiger, Philadelphia

7. J T Carstensen, "*Drug Stability*", Marcel Dekker Inc., NY

B. PHARMACY VTH SEMESTER

BPH – 5.2: PHARMACEUTICAL CHEMISTRY VII (Medicinal Chemistry I)

THEORY: Lectures: 6 hrs / week

UNIT-I

Basic Principles of Medicinal Chemistry: Physio-chemical aspects of Drug action- Stereochemical aspects of drug action (Optical, geometric and bioisotermism of drug molecules with biological action), conformational isomerism, solubility and partition coefficient, chemical bonding. Drug-receptor interactions- receptor concept, receptor- effector theories, types of receptor and their action including transduction mechanism and G proteins.

UNIT-II

Mode of action, uses, Structure activity relationship including physiochemical properties of the following classes of drugs. Drugs acting at Synaptic and neuro-effector junction sites: Cholinergics and anticholinergics, antispasmodics, antiulcer drugs, ganglionic stimulants, Neuromuscular blocking agents, sympathomimetic agents including biosynthesis of adrenergic neurotransmitter, adrenergic drugs and adrenoceptor blockers. Autocoids: Antihistamines, Ecosanoids, Anti-inflammatory agents (nonsteroidal), analgesic and antipyretics.

UNIT-III

Diuretics and Antidiuretics. Cardiovascular agents: Antihypertensives, Cardiotonics, Antiarrhythmics, antianginals, anticoagulants and antiplatelets, thrombolytics, antithrombolytics, hypolipoproteinemic drugs. Vitamins- Classification, chemistry of thiamine, pyridoxine, folic acid, ascorbic acid and vitamin A. Insulin and oral hypoglycemic agents. Thyroid and Antithyroid drugs. Oxytocics including oxytocin, ergot alkaloids and prostaglandins.

UNIT-IV

Synthetic procedures of following selected drugs – Neostigmine bromide, Cyclopentolate HCl, Propanthaline bromide, Benzhexol, Diphenhydramine, Chlorpheniramine, Promethazine, Cyclizine, Sodium chromoglycollate, Aspirin, Ibuprofen, Indometacin, Phenazone, Phenylbutazone, Oxyphenbutazone, Allopurinol, Probenecid, Furosemide, Acetazolamide, Chlorthiazide, Hydrochlorthiazide, Spironolactone, Triamterene, Nifedipine, Procainamide, Verapamil, Propranolol, Methyldopa, Clonidine, Guanethidine, Hydrallazine, Phentolamine, Clofibrate, Warfarin, Phenindione, Pyridoxine, Folic acid, Tolbutamide, Methylthiouracil, methimazole.

PRACTICALS (6 hrs / week)

Number of experiments based on the above mentioned theory.

List of Books Recommended

Text Books

1. Wilson and Gisvold's "Textbook of Organic Medicinal and Pharmaceutical Chemistry", J. Lippincot Co., Philadelphia.
2. W. O. Foye, "Principles of Medicinal Chemistry", Lea and Febiger, Philadelphia.

Reference Books

3. C. Hansch, "Comprehensive Medicinal Chemistry", Pergman Press Oxford.
4. Y. C. Martin, "Quantitative Drug Design", Marcel Dekker, Inc. New York.
5. Exploring QSAR
Vol. I- "Fundamentals and Applications in Chemistry and Biology" by C. Hansch and A. Leo.
Vol.II- "Hydrophobic, Electronic and Steric Constants" by C. Hansch, A. Leo and D. Hockman, ACS Books Catalog.
6. M. E. Wolff, Ed. "Burger's Medicinal Chemistry", John Wiley & Sons, New York.
7. T. Nogardy, "Medicinal Chemistry – A Biochemical Approach", Oxford University Press, New York, Oxford.
8. Popst and Perrum, "Computer Aided Drug Design", Academic Press, New York

B. PHARMACY VTH SEMESTER

BPH – 5.3: PHARMACEUTICS VI (Pharmaceutical Engineering II)

THEORY: Lectures: 4 hrs / week

UNIT-1

1. Distillation: Raoult's law, volatility, boiling point diagrams, azeotropic mixtures, equilibrium diagrams, types of distillation, rectification, rectifying columns, downcomers, material and energy balance of a rectifying column, reflux ratio, determination of number of theory plates, H.E.T.P. and steam distillation.
2. Extraction: Factors affecting, equipment for extraction of solids i.e. fixed bed diffusion battery, continuous diffusion battery, basket extractor, Rotocel extractor and Dorr agitator; equipment for liquid-liquid extraction i.e. extraction towers and Podbielniak extractor.

UNIT- II

3. Mixing: Definition, objectives, mechanism, uniformity index, factors influencing selection of suitable mixer. Study of equipment employed for solid-solid, liquid-liquid and solid-liquid mixing. Emulsification equipment.
4. Size separation: Screening equipment i.e. trommels, rotex and hummer; air suspension methods i.e. air separator and cyclone separators; hydraulic separation i.e. elutriation and double cone emulsifier.

UNIT- III

5. Crystallization: crystal forms, habit, Mier's supersaturation theory, crystallizers based on supersaturation, by cooling (i.e. tank crystallizers, agitated batch crystallizers and Swenson-Walker), adiabatic cooling (i.e. vacuum crystallizers) and evaporation (i.e. Krystal crystallizers). Material and energy balance of crystallizer
6. Transportation of materials:
Liquids: Pumps i.e. airlift, ejector, piston plunger, egg, diaphragm, gear, screw, centrifugal and self-priming.
Gases: Ejectors, compressors, fans and blowers.
Solids: Intermittent and continuous methods in vertical, horizontal and inclined plane.

UNIT-IV

7. Materials for pharmaceutical plant construction: factors affecting the selection of a material for pharmaceutical plant, ferrous metals (i.e.

cast iron, steel and stainless steels), nonferrous metals (i.e. Copper and its alloys, aluminium, tin sliver, nickel and alloys), nonmetals i.e. glass, slate, asbestos, rubber, plastics and timber.

8. Industrial hazards and safety precautions: Mechanical-chemical-electrical-fire-dust hazards, safety requirements, accident records etc.
9. Corrosion and its prevention: Types of corrosion causes of corrosion and method for combating corrosion.

PRACTICALS

Numbers of practical based on theory portions of Pharmaceutical Engineering-I and Pharmaceutical Engineering-II and including the following:

1. To perform Reynold's experiment.
2. Determination of fanning factor.
3. Comparison of the sensitivity of various manometers.
4. Determination of flow rate using venturimeter
5. Determination of flow rate using orificemeter
6. Determination of overall heat transfer coefficient.
7. Effect of number of balls on the grinding rate in a ball mill.
8. Efficiency of a centrifugal pump.
9. Effect of thickness of cake on filtration rate in a filter press.
10. Effect of colour on radiation of heat.
11. Overall efficiency of steam distillation.
12. Use of psychrometric chart.
13. Flow rate using pitot tubes.
14. Determination of equilibrium moisture constant.

List of Books Recommended

Text Books

8. Cooper and Gunns' " *Tutorial Pharmacy*", CBS Publishers, Delhi
9. Leon Lachman, H A Liberman and J L Kanig, " *The Theory and Practice of Industrial Pharmacy*", Lea & Febiger, Philadelphia
10. " *Bentley Textbook of Pharmaceutics*", ELBS Bacilliere Tindall.
11. W L Badger and j t Banchemo, " *Introduction to Chemical Engineering*", McGraw Hill International Book Co., London

Reference Books

5. W L McCabe and J C Smith, " *Unit operations of Chemical Engineering*", McGraw Hill International Book Co., London
6. R H Perry and C H Chilton, " *Chemical Engineers Handbook*", McGraw Hill and Co.

B. PHARMACY VTH SEMESTER

BPH – 5.4: PHARMACOLOGY II (Pathophysiology)

THEORY: Lectures: 4 hrs / week

Unit-I

1. Pathophysiology of hypo- & hyper-secretion of endocrine glands & their disorders e.g. Diabetes mellitus.
2. Pathophysiology of anaemia, hypersensitivity, allergic conditions.
3. Pathophysiology of Asthma, Pneumonia, Bronchitis, Emphysema.
4. Pathophysiology of joints disorders – Arthritis, gout, myasthenia gravis, spasticity, tetany, fatigue.
5. Pathophysiology of cataract, glaucoma etc.

Unit II

6. Pathophysiology of psychosis, epilepsy, depression, Parkinson's & Alzheimer's diseases.
7. Basic mechanisms involved in the process of inflammation and repair Alterations in vascular permeability and blood flow, migration of WBC's, mediators of inflammation. Brief outline of the process of repair.
8. Pathophysiology of disorders related to digestive system: Peptic Ulcer, Ulcerative colitis, Crohns disease, Zollinger- Ellison syndrome, Amoebiasis, typhoid, Hepatitis, Cirrhosis of liver, pancreatitis.

Unit III

9. Pathophysiology of hypertension, angina, CHF, myocardial infarction, cardiac arrhythmias, ischemic heart disease, arteriosclerosis.
10. Pathophysiology of renal feature, glomerulonephritis, urinary tract infection.
11. Pathophysiology of tuberculosis, leprosy, malaria, influenza, chicken pox, tetanus, helminthiasis, filariasis.

Unit IV

12. Pathophysiology of sexually transmitted diseases, spermatogenesis, oogenesis.
13. Pathophysiology of syphilis, gonorrhoea and AIDS.
14. Pathogenesis & morphology of cell injury. Atrophy, hypertrophy, aplasia, metaplasia, & dysplasia, intracellular accumulation & pathophysiology of Neoplasm.

B. PHARMACY VTH SEMESTER

BPH – 5.5: PHARMACEUTICS VII (Pharmaceutical Management)

THEORY: Lectures: 4 hrs / week

UNIT-1

1. Concept of Management.
Administrative Management (Planning, Organising, Staffing, Directing and controlling).
Principles of Management (Co-ordination, Communication, Motivation, Decision-making, Leadership, Innovation, Creativity, Delegation of Authority/Responsibility, Record Keeping).
2. Accountancy
Principles of Accountancy, ledger posting and book entries, columns of a cash book, preparation of trial balance, profits and loss account, balance sheet.

UNIT- II

3. Economics
Principles of economics with special reference to the laws of demand and supply, demand schedule, demand curves, labour welfare, procedure of exporting and importing goods.
4. Pharmaceutical Marketing
Functions Buying, selling, transportation, storage, finance, feedback, information, channels of distribution, wholesale, retail, departmental store, multiple shop and mail order business.

UNIT-III

5. Salesmanship: [4]
Principles of sales promotion, advertising, ethics of sales, literature detailing.
6. Material management: [5]
A brief exposure of the basic principles of material management, purchase, store and inventory management.

UNIT- IV

7. Production Management: [5]
A brief exposure of the different aspects of production management, Production planning and control, Plant location, Plant layout and material handling, inspection and maintenance of plant facilities.
8. Personnel Management: [5]

Objectives of personnel management, functions of personnel manager, recruitment, selection procedure, training and its methodology, job evaluation, performance evaluation, promotions, transfers and, termination.

List of Books Recommended

Text Books

1. G W Plossl and O W Wight, "*Production and Inventory Control, Principles and Techniques*", Prentice Hall of India Pvt. Ltd., New Delhi.
2. Banerjee, "*Principle and Practice of Management*", Oxford and I B H Publishing Company. New Delhi..
3. Rustam S Pavel, "*Salesmanship and Publicity*", Progressive Corporation Pvt. Ltd. Mumabai.

Reference Books

4. S P Ganguly, "*Principles and Practice of Management*", Chatterjee Publishing Concern, Calcutta
5. K S menon, "*Purchasing and Inventory Control*", Wheeler Publishing, Allahabad.
6. C B Gupta, "*Principles and Practice of Management*", National publishing House, New Delhi

B. PHARMACY VITH SEMESTER

BPH – 6.1: PHARMACEUTICS VIII (Dosage Form Design)

THEORY: Lectures: 6 hrs / week

Unit - I

1. Routes of Drug Administration
2. Types of Dosage Forms and Delivery Systems
3. New Drug Approval Process
4. Preformulation studies:
 - a) Study of following **physical properties** of drugs and their effect on formulation, stability and bioavailability:
 - *Physical form,*
 - *Particle size, shape and surface area*
 - *Density,*
 - *Wetting*
 - *Dielectric constant,*
 - *Solubility,*
 - *Dissolution, and*
 - *Organoleptic properties.*
 - b) Study of the following **chemical properties** of drugs and their influence on formulation and stability of products like:
 - *hydrolysis,*
 - *oxidation,*
 - *reduction,*
 - *racemization,*
 - *polymerization.*
 - c) **Pharmacological factors (Biological factors)**

Unit - II

5. Theory, Industrial Production, SOPs, Packaging, Labeling and Quality Control (official and other methods) of
 - **Syrups**
 - **Suspensions**
 - **Emulsions**
 - **Ointments**
 - Stabilization and Stability Testing Protocols for the above mentioned pharmaceutical products. Schedule 'P' and ICH Guidelines on Stability.
6. **Prodrugs** : Types and approaches to make prodrugs. Role of prodrugs in solving problems related to formulation development, stability and bioavailability.
7. **Radiopharmaceuticals**: Fundamentals of Radio-pharmacy, therapeutic applications of isotopes, diagnostic applications of isotopes, use of radioisotopes in basic research, product

development, product production, process control and quality control.

Unit - III

8. Nomenclature of Cosmetic Ingredients
9. Legal Aspects of Cosmetics and Functional Cosmetics (D&C, USFDA, EU, Health Canada, TGA, WHO, CHIC regulations)
10. Water in Cosmetics
11. Naturals in Cosmetics (Botanical, Animal, Milk and Minerals)
12. Colors in Cosmetics
13. Perfumes and Fragrances in Cosmetics
14. Preservatives in Cosmetics and Microbiological control of Cosmetics.

Formulation, preparation and quality control of the following colored cosmetics:

15. Lipsticks and Lip salves, Nail lacquers and Eye Cosmetics

Unit – IV

16. Structure and functions of Hair, Teeth and Skin. Types of skin glands and skin secretions and physiology of sweating

Formulation, preparation and quality control of the following cosmetics:

17. Tooth powders and Tooth paste
18. Antiperspirants and Deodorants
19. Creams -- Cold cream and Cleansing cream, Vanishing cream, Sunscreen cream, Foundation cream, Moisturizing cream
20. Hair cosmetics – Shampoos, Hair creams and fixers, Hair Colorants and Dyes,
21. Depilatories, Shaving creams and After Shave Lotion.
22. Astringents and Skin Tonics

PRACTICALS (lectures = 06 hrs per week)

- Preformulation studies including drug-excipient compatibility studies, effect of stabilizers, preservatives etc. in dosage form design.
- Experiments to illustrate comparative study of **Suspending Agents, Emulsifying agents, Preservatives and Antioxidants.**
- Formulation, preparation, packing, labeling and evaluation of the following class of dosage forms using laboratory scale equipments- Syrups (including dry syrups), **Suspensions, Emulsions and Topical Preparations.**
- Synthesis and characterization of some **Prodrugs**
- Stability evaluation of various dosage forms and determination of their shelf life.
- Preparation and evaluation of (a) Cold cream (b) Vanishing cream (c) Sunscreen cream (d) Hair creams (e) Shampoos (f) Shaving cream (g) Tooth powder (h) Tooth paste (i) Mouth wash (j) Lipsticks ,etc. as per BIS or other methods

- Any other experiments illustrative of the portion covered in the theory portion of the syllabus.

Books Recommended

13. Harry’s Cosmeticology

B. PHARMACY VITH SEMESTER

BPH – 6.2: PHARMACOLOGY III

THEORY Lectures: 6 hrs / week

Unit-I

1. General pharmacology:

- a. Introduction to pharmacology, sources of drugs, dosage forms and routes of administration, mechanism of action, combined effect of drugs, factors modifying drug action, tolerance and dependence, pharmacogenetics.
- b. Absorption, distribution, metabolism and excretion of drugs, principles of basic and clinical pharmacokinetics, adverse drug reactions and treatment of poisoning, ADME drug reactions, bioassay of drugs and biological standardization, discovery and development of new drugs.

2. Pharmacology of autonomic nervous system:

- a. Neurohumoral transmission (autonomic and somatic)
- b. Parasympathomimetics, Parasympatholytics, Sympathomimetics, Sympatholytics, Ganglion blocking and Stimulating agents
- c. Neuromuscular blocking agents.
- d. Local anaesthetic agents.

Unit-II

3. Pharmacology of Central Nervous System:

- a. Neurohumoral transmission in the C.N.S.
- b. General anaesthetics
- c. Alcohols and Disulfiram
- d. Sedative and hypnotics
- e. Anti-anxiety agents and centrally acting muscle relaxants
- f. Psychopharmacological agents (Anti-psychotic, antidepressants, antimaniacs and hallucinogens)
- g. Anti-epileptic drugs
- h. Anti-parkinsonian drugs
- i. Analgesics, antipyretics and anti-inflammatory agents
- j. Narcotic analgesics and antagonists.
- k. CNS stimulants
- l. Drug Addiction & drug abuse.

Unit-III

4. Pharmacology of Endocrine system:

- a. Hypothalamic and pituitary hormones
- b. Thyroid hormones and antithyroid drugs,

- c. parathormone calcitonin and vitamin D.
- d. Insulin, oral hypoglycemic agents and glucagon.
- e. ACTH and corticosteroids.
- f. Androgens and anabolic steroids.
- g. Drugs acting on the uterus.

5. Autocoids:

- a. Histamine, 5-HT and their antagonists
- b. Prostaglandins, thromboxane and Leukotrienes
- c. Pentagastrin, cholecystokinins, angiotensin, bradykinin and substance P.

Unit-IV

6. Important disorders of organ system and their management:

- a. CNS disorders: epilepsy, Parkinson's disease, Alzheimer's disease, depression, schizophrenia, migraine.
- b. Endocrine disorders: Diabetes Mellitus and thyroid disorders.
- c. Joint and connective tissue disorders: rheumatic disease, gout and hyperurricemia.

PRACTICALS (6 hrs / week)

Number of experiments based on aforementioned theory portion and including the following:

1. Introduction to experimental pharmacology
 - a) Preparation of different solutions for experiment
 - b) Drug dilutions, use of molar and wt/volume solution in experimental pharmacology.
 - c) Common laboratory animals and anaesthetic used in animal studies.
 - d) Commonly used instruments in experimental pharmacology
 - e) Some common and standard techniques
Bleeding and intravenous injection, intra-gastric administration, procedures for rendering animals unconscious-stunning of rodents, pithing of frogs, chemical euthanasia.
2. Experiment on intact preparation
 - a) Study of different routes of administration of drugs in mice/rats
 - b) To study the effect of hepatic microsomal enzyme inhibitors and induction on the pentobarbital sleeping time in mice
3. Experiments on central nervous system

Recording of spontaneous motor activity, stereotype, analgesic, anticonvulsant, anti-inflammatory activity, and muscle relaxation activity of drugs using simple experiments.

4. To study the effect of autonomic drugs on rabbit eye.
5. To study the effect of various agonists and antagonists and their characterization using isolated preparations like frog's rectus abdominus muscle and isolated ileum preparations of rat, guinea pig and rabbit.
6. Experiments on isolated preparations:
 - a) To record the CRC of acetylcholine using rectus abdominus muscle preparations of frog.
 - b) To study the effects of Physostigmine and d-tubocurarine on the CRC of Ach using rectus abdominus muscle preparation of frog.
 - c) To record the CRC of 5-HT on rat fundus preparation
 - d) To record the CRC of Histamine on guinea pig ileum preparation.
 - e) To record the CRC of Nor-adrenaline on Rat anococcygenus muscle preparation.
 - f) To record the CRC of oxytocin using rat uterus preparation.
7. Pharmacology of cardiovascular system
 - a) To study the inotropic and chronotropic effects of drugs on isolated frog heart.
 - b) To study the effect of drugs on normal and hypodynamic frog heart.
8. To demonstrate the effect of various drugs on B.P. and respiration including the vasomotor reversal of Dale and Nicotinic action of acetylcholine.

List of Books Recommended

Text Books

1. H. P. Rang and M M Dale, "*Pharmacology*", Churchill Livingstone.
2. Berar, F S K "*Textbook of Experimental Pharmacology*", Interprint, New Delhi.

Reference Books

B. PHARMACY VITH SEMESTER

BPH – 6.3

PHARMACOGNOSY III

THEORY Lectures: 4 hrs / week

Unit - I

1. General technique of biosynthetic studies and basic metabolic pathways. An introduction to biogenesis of secondary metabolites of pharmaceutical importance.
2. Study of chemical and spectral approaches to simple molecules of natural origin.
3. Concept of stereoisomerism taking examples of natural products.

Unit - II

4. Biogenesis of monoterpenes, sesquiterpenes, diterpenes and triterpenoids. Chemistry of at least two medicinally important terpenoids from each class.
5. Chemistry of medicinal important irridoids.

Unit - III

6. Carotenoids, beta-carotenoids, alpha-carotenes, vitamin A, xanthophylls of medicinal importance.
7. Steroids and cardiac glycosides: Utilization of plants as a source of raw material for the production of steroids, biosynthesis and chemistry of diosgenin, sarasapogenin, digitoxin and digoxin.

Unit - IV

8. Alkaloids: chemistry and biogenesis of atropine and related compounds, quinine, reserpine, morphine, papaverine, ephedrine, ergot and vinca-alkaloids.
9. Chemistry of penicillins, streptomycin and tetracyclines.

PRACTICALS

1. Laboratory experiments on isolation, separation, purification of various groups of chemical constituents of pharmaceutical importance.
2. Exercises on paper and thin layer chromatographic evaluation of herbal drug constituents.
3. Authentication & standardization of crude drugs.

B. PHARMACY VITH SEMESTER

BPH – 6.4: PHARMACEUTICS IX (Forensic Pharmacy)

THEORY Lectures: 6 hrs / week

Unit- I

1. A brief review of evolution of Pharmaceutical legislation in India.
2. Pharmacy Act, 1948.
3. Drugs and Cosmetics Act, 1940 and rules thereunder.

Unit - II

4. AICTE Act, 1987.
5. Medicinal and Toilet Preparations (Excise Duties Act), 1955.
6. Shops and Establishments Act of the state.
7. Medical termination of Pregnancy Act 1970 and Rules 1975.

Unit - III

8. Narcotic Drugs and Psychotropic Substances Act, 1985 and rules.
9. Drugs and Magic Remedies (Objectionable Advertisements) Act, 1954.
10. DPCO, 1995.

Unit - IV

11. Pharmaceutical Ethics
12. Patents Act, 1970 and rules.
13. Minimum Wages Act, 1948 and rules.
14. Poisons Act, 1919.
15. Prevention of Cruelty to Animal Act 1960.

Note: The teaching of all the above acts should cover the latest amendments.

B. PHARMACY VIITH SEMESTER

BPH – 7.1: PHARMACEUTICS X (Pharmaceutical Technology)

THEORY Lectures: 6 hrs / week

Unit - I

1. **Tablets:** Types of tablets, formulation of tablets, various granulation techniques including slugging, chilsonator, extractor, Day-Nauta granulator, double cone granulator, spray granulator. Tableting machinery for production of single layer, multilayer and compression coated tablets.

Physics of tablet making: strain gauge, measurement of applied and transmitted pressure, distribution of forces during compression, effect of applied pressure on relative volume and factors affecting strength of tablet.

Tablet coating: sugar coating, film coating and compression coating, coating processes i.e. air suspension coating and pan coating (using conventional, rear vented and perforated pans).

Quality Control of Tablets.

Unit - II

2. **Capsules:** Types, material, machinery, manufacture, sizes and other pharmacopoeial requirements of capsule shells Formulation, large-scale production and quality control of *Hard* and *Soft* capsules. Applications, advantages and disadvantages of capsule dosage form.
3. **Microencapsulation:** Terminology, advantages and applications. Study of various processes employed for microencapsulation i.e. coacervation phase separation, multiorifice, centrifuge, electrostatic deposition, vacuum deposition, spray drying, spray congealing, polymerization, complex emulsion, air suspension technique and pan coating.
4. **Aerosols:** Definitions, advantages and applications, liquified-gas system, compressed gas system, propellants, containers, valves, cold-filling process, pressure filling process and quality control of aerosols.

Unit - III

5. **Parenterals:** Types of parenteral products and formulation considerations. *Types and Quality of Water* used in Parenterals and requirement of Clean room.

Production facilities, methods of production, containers and packaging of Small Volume and Large Volume Parenterals and their *quality control*.

Large scale production of Injectable Grade Water

Quality control of parenterals.

6. **Controlled and Novel Drug Delivery:** Classification, design, development, production and evaluation of Oral and Controlled Drug Delivery Systems.

Unit - IV

7. **Optimization Techniques: Optimization parameters, Classical Optimization, Statistical Design, Optimization techniques and methods in formulation and pharmaceutical processing (like Simplex Method, Langrangian Method, etc).**
8. **GMP:** Concept of Good Manufacturing Practices, Study of Schedule 'M' of D&C Act and cGMP guidelines of USFDA for *Solid Dosage Forms* and *Parenterals*.
9. **Process Validation:** Process validation methods for operations involved in the production of Tablets.
10. **Scale up Techniques :** Basic Concepts, Scale up of Tablets.

PRACTICALS (06 hrs per week)

Number of experiments based on aforementioned theory

Books Recommended

1. "Remington' *Pharmaceutical Sciences*", Mack Publishing Co., P.A.
2. Leon Lachman, H A Liberman and J L Kanig, "*The Theory and Practice of Industrial Pharmacy*", Lea & Febiger, Philadelphia
3. "*Bentley's Textbook of Pharmaceutics*", ELBS Bacilliere Tindall
4. "*Modern Pharmaceutics*", ed G S Banker and Rhodes, Marcel Dekker Inc., NY
5. S Turco and R E king, "*Sterile Dosage Forms*", Lea & Febiger, Philadelphia
6. H A Liberman, L Lachman and J B Schwartz, "*Pharmaceutical Dosage Forms: Tablets*", Vol. 1, Marcel Dekker Inc, NY
7. Encyclopedia of Pharmaceutical Technology by Swarbrick
8. Commercial's Hand book of Drug Laws
9. Pharmacopoeia of India.

B. PHARMACY VIITH SEMESTER

BPH – 7.2: PHARMACEUTICAL CHEMISTRY VIII (Analytical Chemistry II)

THEORY Lectures: 6 hrs / week

Unit - I

Quality Assurance: Philosophy of GLP, ISO-9000, TQM, quality Review and Quality documentation. Regulatory aspects: Legislation & regulatory control, regulatory drug analysis, interpretation of analytical data. Validation /Quality audit; Quality of equipment, Validation of equipment, Validation of analytical procedures.

Unit - II

The theoretical aspects, basic instrumentation, elements of interpretation of spectra and applications of the following analytical techniques should be thoroughly studied

- Ultraviolet and Visible Spectrophotometry.
- Fluorimetry.
- Infrared spectrophotometry.
- Nuclear magnetic resonance spectroscopy including ¹³C NMR.
- Mass spectroscopy.

Unit - III

The theoretical aspects, basic instrumentation, elements of interpretation of spectra and applications of the following analytical techniques should be thoroughly studied

- Flame photometry.
- Emission spectroscopy.
- Atomic absorption spectroscopy

Unit - IV

Fundamentals of Chromatography. Introduction and theory of underlying different types of chromatography techniques like- Column chromatography, thin layer chromatography, paper and circular chromatography, adsorbents and solvents used in these techniques. Gas chromatography: introduction, principles of gas chromatography, basic GLC apparatus, sample introduction, column, column efficiency, solid support, liquid phases, branches of gas chromatography, detectors, temperature effect, application of GLC in pharmaceutical analysis. HPLC: introduction and nomenclature, instrumentation, liquid solid chromatography, liquid liquid chromatography, exclusion chromatography, HPLC columns, solvent selection in HPLC, data handling in HPLC, application of HPLC. TLC quantitative estimate.

PRACTICALS (6 hrs / week)

Number of experiments based on aforementioned theory portion.

List of Books Recommended

Text Books

- William Kemp, “*Organic Spectroscopy*”, Macmillan Press Ltd.
- Willard, Merritt, Dean, Settle, “*Instrumental Method of Analysis*”, CBS Publishers, New Delhi.
- K. A. Connors, “*A Textbook of Pharmaceutical Analysis*”, Wiley Interscience, New York.

Reference Books

- Silverstein et al., “*Spectrometric Identification of Organic Compounds*”.
- Skoog, “*Fundamental of Analytical Chemistry*”.
- John R. Dyer, “*Applications of Absorption Spectroscopy of Organic Compounds*”.

B. PHARMACY VIITH SEMESTER

BPH – 7.3: PHARMACOGNOSY IV

THEORY Lectures: 5 hrs / week

Unit - I

- Role of medicinal and aromatic plants in national economy.
- World-wide trade in medicinal plants and derived products with special reference to the status and potential of diosgenin (dioscorea), taxol (taxus sps), digitalis, podophyllum, vinca, papain, cinchona, liquorice, ginseng, aloe vera, rauwolfia and plant containing laxatives.

Unit - II

- Plant based industries and institutions involved in research and analysis of medicinal and aromatic plants in India.
- Economic utilization and production of phytoconstituents of aloes, senna, ispaghula, digitalis, dioscorea, poppy, ergot, cinchona, tropane and vinca alkaloids.
- Chemotaxonomy of medicinal plants.

Unit - III

- Marine pharmacognosy: Novel medicinal agents from marine sources.
- Utilization of aromatic plants and derived products with special reference to the isolation methods and chemical profile of mentha oil, sandalwood oil, fennel oil, geranium oil and eucalyptus oil.

Unit - IV

8. Historical development of plant tissue culture, types of cultures, nutritional requirements, growth and their maintenance. Application of plant tissue culture in pharmacognosy.
9. Natural allergens and photosensitizing agents.

PRACTICALS (6 hrs per week)

Number of experiments based on aforementioned theory and including the following:

1. Isolation and analysis of some selected phytoconstituents studied in theory.
2. Extraction of volatile oils and their chromatographic profiles.
3. Some experiments on basic techniques of plant tissue culture.

List of Books Recommended

Text Books

1. Brain, K. R. and Turner, T. D., "*The Practical Evaluation of Phytopharmaceuticals*", Wright – Scientehnica, Bristol.
2. "*Export Potential of Selected Medicinal Plants*", Prepared by Basic Chemicals, Pharmaceuticals and Cosmetic export Promotion Council, Bombay, and other reports..
3. "Herbal Drug Industry", Eastern Publishers.

Reference Books

1. Pridham, J. B. and Swain, T., "*Biosynthetic Pathways in Higher Plants*", Academic Press, New York
2. Wealth of India.
3. "*Supplement to Cultivation and Utilization of Medicinal Plants*", RRL, Jammu-Tavi
4. Chopra, R. N., Nayar S. L. and Chopra, I. C., "*Glossary of Indian Medicinal Plants*", C S I R, New Delhi.
5. "Cultivation and Utilization of Aromatic Plants", RRL-Jammu Tavi

8. "Cultivation and Utilization of Aromatic Plants", RRL-Jammu Tavi

B. PHARMACY VIITH SEMESTER

BPH – 7.4: HARMACOLOGY IV

THEORY Lectures: 5 hrs / week

Unit-I

1. Introduction to Biotechnology:

- a. Definition, history, different branches and scope of biotechnology.
- b. Therapeutic and pharmaceutical applications of biotechnology.

2. Enzymes:

- a. Production of enzymes
- b. Methods of immobilization of enzymes: Adsorption, entrapment, microencapsulation and covalent coupling
- c. Analytical applications of immobilized enzymes
- d. Enzymes used in DNA recombinant technology
- e. Study of enzymes such as hyaluronidase, streptokinase, streptodornase, amylases and protease etc.

Unit-II

3. Immunology and Immunological preparations:

Cellular and humoral immunity, immunological tolerance, antigen-antibody reactions and their applications.

4. Genetic engineering:

- a. Concept and techniques of genetic engineering (gene transfer via transduction, transformation, conjugation, protoplast fusion and gene cloning).
- b. DNA replication, its repair and recombination.
- c. Applications of genetic engineering for production of pharmaceuticals

Unit III

5. Tissue Culture and Cell Culture Technology:

- a. Introduction to cell culture and culture media
- b. Culture procedures and primary cultures
- c. Evolution of mammalian cell lines
- d. Cloning of cell lines
- e. Animal tissue culture and organ culture
- f. Embryo culture and egg culture
- g. Culturing of human embryonic stem cells
- h. *In vitro* fertilization in humans

6. Biotechnology in the field of pharmacy:

- a. Study and production of drugs obtained from biotechnology: Erythropoietins, interferons, vaccines, anticoagulants / thrombolytic agents, monoclonal antibodies, hormones etc.
- b. Design of drug delivery system for biotechnological products

Unit IV

7. Oncogenes and Tumor Suppressor Genes:

- a. Viral and cellular oncogenes.
- b. Tumor suppressor genes from humans.
- c. Structure, function and mechanism of action of pRB and p53 tumor suppressor proteins.

List of Books Recommended

Text Books

1. "Biotechnology and its Applications in Pharmacy", CBS Publishers.
2. S P Vyas and V Dixit, "Pharmaceutical Biotechnology", CBS Publishers.

Reference Books

1. B R Glick and J J Pasternak, "Molecular Biology; The Principle and Applications of Recombinant DNA", ASM Press.
2. "Harper's Review of Biochemistry", Lange Medical Publications.
3. 4. Prescott and Dunn, "Industrial Microbiology", Mcgraw Hill Book Company Inc.

B. PHARMACY VIIITH SEMESTER

BPH – 8.1: PHARMACEUTICAL CHEMISTRY IX (Medicinal Chemistry II)

THEORY Lectures: 6 hrs / week

Unit I

Drug metabolism. Functionization reactions (Phase I)- Oxidation, reduction and hydrolytic reactions. Conjugation reactions: Glucuronic acid conjugation, sulphate conjugation, conjugation with amino acids, glutathione conjugation, acetylation, methylation. Chemistry and principles of prodrug design. QSAR by Hansch analysis

Unit II

Mode of action, uses, structure activity relationship including physico-chemical properties of the following classes of drugs: Drugs acting on Central nervous System: General anesthetics, Local anesthetics, Hypnotics and sedatives, opioid analgesics, antitussives, anticonvulsants, antiparkinsonian drugs, CNS stimulants, psychopharmacological agents (neuroleptics, antidepressants, anxiolytics). Steroids and related drugs: Steroidal nomenclature and stereochemistry; androgens and anabolic agents; oestrogens and parogestational agents; adrenocorticoids.

Unit III

Chemotherapeutic agents: Antibacterials including antimetabolites. Antibiotics (b-lactams, tetracyclines, aminoglycosides, polyenes, cycloserine, chloramphenicol). Antiviral agents including anti-HIV agents, Antineoplastics, Antifungals, Antimycobacterials, Antihelmentics. Antiprotozoals. Antiseptics and disinfectants. Urinary antiseptics.

Unit IV

Synthetic procedure for following drugs: Procaine, Lignocaine, Cinchocaine, Thiopentone, Phenobarbitone, Hexobarbitone, Diazepam, Mehtaqualone, Phenytoin, Troxidone, Pethidine, N-methylmorphine, Chlorpromazine, Trifluoperazine, Amitryptiline, Nikethamide, Cholesterol, Dihydroepiandrosterone, Oestradiol, Diethylstilbosterol, Progesterone, Cortisone acetate, Diethyl carbamazine, Thiabendazole, Sulphadiazine, Sulphamethoxazole, Trimethoprim, Chloramphenicol, Nalidixic acid, Norfloxacin, Nitorfurantoin, Isoniazid, Ethambutol, Clofazimine, Ketoconazole, Clotrimazole, Chlorambucil, Melphalan, Thio-TEPA, 5-Fluorouracil, Cisplatin.

PRACTICALS (6 hrs / week)

Number of experiments based upon aforementioned theory.

List of Books Recommended

Text Books

1. Wilson and Gisvold's "Textbook of Organic Medicinal and Pharmaceutical Chemistry", J. Lippincot Co., Philadelphia.
2. W O Foye, "Principles of Medicinal Chemistry", Lea and Febiger, Philadelphia.

Reference Books

3. C. Hansch, "Comprehensive Medicinal Chemistry", Pergman Press Oxford.
4. M. E. Wolff, Ed., "Burger's Medicinal Chemistry", John Wiley & Sons, New York.
5. T. Nogardy, "Medicinal Chemistry – A Biochemical Approach", Oxford University Press, New York, Oxford.
6. B. N. Ladu, H. G. Mandel and E. L. Way, "Fundamentals of Drug metabolism and Disposition", William and Walkins Co., Preston Street, Baltimore.
7. Martindale, "The Extra Pharmacopoeia", The Pharmaceutical Press, London.

B. PHARMACY VIIITH SEMESTER

BPH – 8.2: PHARMACOLOGY V

THEORY Lectures: 6 hrs / week

Unit-I

1. Drugs acting on the Gastrointestinal Tract:

- a. Antacids, antisecretory and anti-ulcer drugs.
- b. Laxative and antidiarrhoeal drugs.
- c. Appetite stimulants and suppressants.
- d. Emetics and anti-emetics.
- e. Miscellaneous: carminatives, demulcents, protectives, adsorbents, astringents, digestants, enzymes and mucolytics.

2. Pharmacology of Cardiovascular system

- a. Digitalis and cardiac glycosides
- b. Anti-hypertensive drugs
- c. Anti-anginal and vasodilator drugs
- d. Anti-arrhythmic drugs.
- e. Anti-hyperlipidemic drugs
- f. Drugs used in therapy of shock

3. Drugs acting on the urinary system

- a. Fluid and electrolytic balance

b. Diuretics

4. Drugs acting on the Haematopoietic system

- a. Haematinics
- b. Anticoagulants, vitamin K and haemostatic agents
- c. Fibrinolytic and Anti-platelet drugs
- d. Blood and plasma volume expanders

Unit II

5. Drugs acting on the respiratory system

- a. Anti-asthmatic drugs including bronchodilators
- b. Anti-tussive and Expectorants
- c. Respiratory stimulants

6. Chemotherapy:

- a. General principles of chemotherapy.
- b. Sulphonamides and co-trimoxazole.
- c. Antibiotics, penicillins, cephalosporins, betalactamas, tetracyclines, aminoglycosides, chloramphenical, erythromycin, quinolones and miscellaneous antibiotics.
- d. Chemotherapy of tuberculosis, lprosy, fungal diseases, viral diseases, urinary tract infections and sexually transmitted diseases.
- e. Chemotherapy of malignancy and Immunosuppressive agents.

Unit III

7. Principles of Toxicology:

- a. Definition of poison, general principles of treatment of poisoning with particular reference to barbiturates opioids, organophosphorus and atropine poisoning.
- b. Heavy metals and heavy metal antagonists

8. Introduction to Clinical Pharmacy.

9. Therapeutic drug monitoring.

10. Concept of essential drugs and rationale drug use.

11. Basic concepts of Pharmacotherapy:

- a. Clinical Pharmacokinetics and individualisation of drug therapy.
- b. Drug delivery systems and their biopharmaceutic and therapeutic considerations.
- c. Drug use during infancy and in the elderly (Paediatrics & Geriatrics).
- d. Drug use during pregnancy.
- e. Drug induced disease.
- f. The basics of drug interactions.

g. General principles of clinical toxicology.

h. Interpretation of clinical laboratory tests.

Unit IV

12. Important disorders of organ system and their management:

- a. Cardiovascular disorders: hypertension, congestive heart failure, angina, acute myocardial infraction and cardiac arrhythmias.
- b. Respiratory disease: asthma.
- c. Gastrointestinal disorders: peptic ulcer disease, ulcerative colitis, hepatitis and cirrhosis.
- d. Mematopoietic disorders: anemias.
- e. Infections disease: tuberculosis, urinary tract infection, enteric infections, upper respiratory infections.
- f. Neoplastic disease: acute leukemias, Hodgkin's disease and Carcinoma of breast.

PRACTICALS (6 hrs / week)

Number of experiments based on aforementioned theory and including the following:

1. Experiments on isolated preparations:

- a) To calculate the PA_2 value of atropine using acetylcholine as an agonist on rat ileum preparation.
- b) To calculate the PA_3 value of mepyramine or chlorpheniramine using histamine as agonist on guinea pig ileum.
- c) To find out the strength of the given sample on agonist (e.g. Acetylcholine, Histamine, 5-HT, Oxytocin etc.) using a suitable isolated muscle preparation by-
 - Matching Assay
 - Two Point Assay
 - Three Point Assay

2. Pharmacology of the Gastrointestinal Tract:

To study the anti-secretory and anti-ulcer activity using pylorus ligated rats.

3. Clinical Pharmacology:

To demonstrate the effects of certain clinically useful drugs on human volunteers like:

- a) Anti-histamines
- b) Anti-anxiety and sedative drugs
- c) Analgesics.
- d) Betablockers.

List of Books Recommended

Text Books

1. Katzung, B G, "Basic and Clinical Pharmacology", Prentice Hall International
2. Davidson's Principles and Practice of Medicine", Churchill Livingstone

Reference Books

3. Goodman and Gilman's, "The Pharmacological Basis of Therapeutics", Pergman Press.
4. Paul L, "Principles of Pharmacology", Chapman and Hall.
5. H. P. Rang and M M Dale, "Pharmacology", Churchill Livingstone..
6. Herfindal E T and Hirschman, J L, "Clinical Pharmacy and Therapeutics", Williams and Willkins.
7. Dipiro, J L, "Pharmacotherapy: A Pathophysiological Approach", Elsevier.
8. Laurence, D R and Bennet, P N, "Clinical Pharmacology", Churchill Livingstone."

B. PHARMACY VIIITH SEMESTER

BPH – 8.3: PHARMACEUTICS XII (Biopharmaceutics)

THEORY Lectures: 6 hrs / week

Unit - I

1. Introduction to Biopharmaceutics and Pharmacokinetics and their role in formulation development and clinical setting.
2. Passage of drugs across biological barrier (passive diffusion, active transport, facilitated diffusion and pinocytosis).
3. Factors influencing absorption-physiochemical, physiological and pharmaceutical.
4. Drug distribution in the body, barriers to distribution of drugs in the body.
5. Models in Biopharmaceutics – Introduction to compartment models, non-compartmental models, physiological models and pharmacological models.

Unit - II

6. One compartmental kinetics – determination of various pharmacokinetic parameters, such as K, t_{1/2}, V_d, etc., after drug administration by intravascular route and oral route, from plasma and urine data. Significance of plasma drug concentration measurements and various pharmacokinetic parameters as above. Application of method of residuals in compartmental kinetics.

7. Two compartmental kinetics – determination of various pharmacokinetic parameters, such as K, t_{1/2}, V_d, etc., after drug administration by intravascular route and oral route, from plasma and urine data. Significance of plasma drug concentration measurements and various pharmacokinetic parameters as above. Application of method of residuals in compartmental kinetics. Application of Wagner nelson method and Loo-Riegelmann method.

8. Pharmacokinetics of drug administration by slow intravenous infusion route.
9. Multiple dosage regimen – oral and iv route. Principle of superposition.

Unit - III

10. Binding of drugs to plasma proteins, kinetics of plasma protein binding, plasma protein binding displacement interactions.
11. Metabolism of drugs : Hepatic metabolism of drugs, first pass effect, extraction ratio, biliary excretion of drugs, enterohepatic circulation.
12. Elimination of drugs : Renal and non-renal excretion of drugs, concept of clearance, renal clearance.
13. Non-linear pharmacokinetics with special reference to one compartment model after I.V. drug administration, Michales Menten equation, determination of non-linearity (saturation mechanism).

Unit - IV

14. Non-linear pharmacokinetics with special reference to one compartment model after I.V. drug administration, Michales Menton equation, determination of non-linearity (saturation mechanism).
15. Adjustment of dosage regimen in patients of renal failure.
16. Introduction to pharmacokinetic drug interactions and their significance in combination therapy.
17. Bioavailability and bioequivalence. Measures of bioavailability – C_{max}, t_{max} and Area under the curve, AUC. Design of single dose bioequivalence study. Overview of regulatory requirements for bioavailability and bioequivalency.

PRACTICALS : (6 hr / wk)

Number of experiments based on aforementioned theory topics, should be conducted.

List of Books Recommended

Text Books

1. L Shargel and B C Andrew, "Applied Biopharmaceutics and Pharmacokinetics", Prentice Hall International, USA.

B. PHARMACY VIIITH SEMESTER

BPH – 8.4: PHARMACEUTICS XIII (Pharmaceutical Packaging)

THEORY Lectures: 6 hrs / week

Unit - I

1. **Introduction:** Purpose of packaging, selection of the ideal package, hazards encountered by the package, various types of inner and outer packages, selection of a suitable package .
2. **Child resistant package and Tamper Evident Packaging.**
3. **Packaging materials:** Detailed study with regard to composition packaging characteristics, advantages, economics and limitations of various packaging materials with special emphasis on glass, plastics, metals and rubber. Evaluation of packaging materials.
4. **Environmental considerations of packaging**

Unit - II

5. Production of **oriented and non-oriented films and laminates.**
6. **Strip Packing:** Significance of Strip Packing, advantages, economics and limitation of Strip Packing, Strip Packing machinery, films employed in Strip Packing (including composites and laminates) and evaluation of films and strips packs.
7. **Blister Packaging:** Blister packing materials, significance of Blister packing, advantages, economics and limitation of blister packing, blister packing machinery, various types of blister packages, evaluation of blister package.

8. **Pouch packaging:** Materials used, advantages, economics and limitation of pouch packing, pouch packing machinery, spectrum of applications, evaluation of pouch packing.

Unit - III

9. **Liquid Formulation Packaging:** Various containers/closures employed for liquid formulations. Machinery employed for liquid filling – constant level, volumetric, gravimetric etc. Evaluation of liquid formulation packages.
10. **Semi-Solid Packaging:** Various types of containers/packages used for semi-solid products, filling and sealing machinery (including collapsible tube filling and sealing machine) merits and limitations of various packages, evaluation of semi-solid product package.
11. **Labelling:** Types of label(including Bar code, RF, structured program, ,in-mould and decorative labeling),Legal requirements of Labelling, packaging inserts and outserts. Adhesives and machinery employed for labelling. Concept of paperless labeling.

Unit - IV

12. **Sterile Product Packaging:** General principles of packaging of sterile products. Various types of containers used for sterile products including small volume and large volume parenterals. Types of closures used for the sterile products. Sterile product filling and sealing machinery i.e. ampoule filling and sealing machine. Limitations and merits of various packages. Evaluation of the sterile product packages

Books Recommended
