	<p>Read the following passage carefully and answer the questions no. (76-80):</p> <p>As the rulers of the planet, humans like to think that it is the large creatures that will emerge victorious from the struggle for survival. However, nature teaches us the opposite it is often the smallest species which are the toughest and most adaptable. A perfect example is the hummingbird, which is found in the Americas. One species of hummingbird is known as the bee hummingbird ranks as the world's smallest and lightest bird and it is barely visible when it is in flight. Humming birds are the only birds that can fly backwards. They feed mainly on the Nectar of flowers, a liquid that is rich in energy. Nectar is an ideal food source, for hummingbirds need an incredible amount of energy to sustain their body metabolism. A hummingbird's wings flap at a rate of about 80 times per second and its tiny heart beats more than 1000 times per minute. This is why they must consume relatively large quantities of food. In the course of a day, a hummingbird consumes about half its body weight in nectar.</p>
